Cannanalytic Lab

Cannalytics Lab

Analytical Report- Certificate of Analysis

Sample Id: ARCCB
Sample Name: Cereal Bar
Sample Type: Edible
Client Arcanna
Address 1184 Clements Ferry Rd

Test Performed: HPLC
Batch Number: 5004
Receive Date: 2/12/24
Test Date: 2/13/24
Sample Weight 1487.51
Product Weight 100g

This report has been prepared by Cannanalytic Labs LLC, exclusively for our client and their authorized representatives. All analytical work is conducted in accordance with a mutually agreed upon scope of work and the terms and conditions as expressed in the Cannanalytics Lab LLC Service Agreement. This report is not to be reproduced in whole or in part without prior written approval. The results shown in this report relate only to the samples submitted to the laboratory. Estimated uncertainty available upon request.

Total Cannbinoids: 0.24 %

Total CBD: 0.14 %

Total THC: 0.08 %

Total THC9: 0.09 %

LOQ for Analytes: 0.035%

Cannabinoids	Result (%)	Result (mg/g)
CBDV	0.001	0.01
CBDVA	0.000	0.00
THCV	0.000	0.00
CBD	0.141	1.41
CBG	0.007	0.07
CBDA	0.000	0.00
CBGA	0.000	0.00
CBN	0.005	0.05
THCD9	0.089	0.89
THCD8	0.002	0.02
CBC	0.000	0.00
CBNA	0.000	0.00
THCA	0.000	0.00
CBCA	0.000	0.00
Total	0.24 %	2.441 mg/g

Equations

Total THC = (THCa * 0.877) + THCD9
Total CBD = (CBDa * 0.877) + CBDa

Total THC Measurement of Uncertainty +/- 0.04%
Total CBD Measurement of Uncertainty +/- 2.00%

Disclaimer: THCa Flower for Informational Purposes Only

This is not legal advice. Should you ned further legal assistance about THCa flower in your state please seek the legal advice of a lawyer. Federal law requires the use of a post-decarboxylation test pre-harvest, neither a post-carboxylation test, nor any test applies to post-production hemp. Since the post-decarboxylation test applies to producers. Once the pre-harvest hemp has accounted for delta-9 THCa, and passed the required post decarboxylation test it may be harvested and no further testing is required. The DEA states the only controlled substance is delta-9 THC greater than 0.3% on a dry-weight basis. Cannanalytics Labs, LLC tests are performed on post-harvest material which means they are decarboxylated tests. The THCa levels may be higher due to heat caused by excitation in the testing process that could cause the conversion of molecules. This test is done solely for informational purposes. The client accepts full responsibility for any legal action that may arise from selling or possessing the products.

Travis Pinkerton 2/13/24
