

Ring size estimator

How to use:

Print this page at 100%, make sure that you do not select the 'scale to fit' option

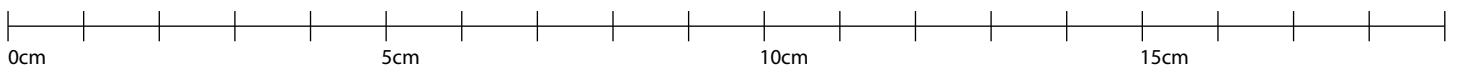

Check the print size (see below)

Use a simple band you already own to check against the circles

Place your ring over the circles to find the nearest match

The printed circle should completely fill the inner diameter of your ring without any overlap and without any white paper showing

Your ring size will be the letter in the circle that matches your ring

Important! Before you use this guide you must check that it has printed out at the correct scale. Measure the line above with a ruler to check that the marks are set at 1cm intervals

Please note this ring size estimator is intended to give a general guide only. For a more accurate measurement we recommend you visit our shop to have your finger measured.
