Vision Superhero For Your Child!

StrongEye™ Kids is an antioxidant-rich tablet specially designed to nurture your child's vision. It is packed with a potent blend of 10 clinically researched nutrients, including the patented ingredient Lutemax®2020 and natural Astaxanthin, which are renowned for their role in maintaining healthy eyes. Additionally, it is fortified with Lycopene, Bilberry, Zinc, and the essential vitamins–A, C, E, and B12, all working together to support healthy eye tissues and enhance blood circulation within the eyes.

Promote sharper vision

Promote healthy eyes and vision

Relieve eye fatigue and dryness

Improve blood flow to the eyes

Protect eyes from harmful blue light, UV rays and free radicals

The Story Behind StrongEye™ Kids

This is a **father's love for his son**. Click to know the heartwarming **story behind StrongEye™ Kids** and how it can **make a world of difference in your child's vision.**

Meet **Mike**, the founder of **US Clinicals**®, a dedicated father who faced the challenge of **his son Shawn's deteriorating vision** at the young age of 10. Shawn's myopia was at **400 degrees**, a cause of great worry for any parent.

With a 16-year background in nutritional science, Mike embarked on a mission to find a solution. He delved deep into studies that explored the connection between **nutritional intake** and **the development of childhood myopia**.

Mike soon realized the lack of suitable **eyecare supplements designed specifically for children**. Products catering to children's eyesight were deficient, and the available formulations left much to be desired. Dissatisfied with the market's shortcomings, Mike was determined to create something better.

After a year of extensive research and **development**, Mike formulates **StrongEye™ Kids**. This groundbreaking nutritional supplement was born out of a passion for **improving children's vision** and **filling the gaps in the eyecare market**. After Shawn began taking StrongEye™ Kids, **his myopia stopped progressing** at its usual pace and remained stable. It was a breakthrough moment in the battle against childhood myopia!

Now, it's your turn to join the adventure!

Singapore, "Myopia Capital of the Word"?

Singapore is one of the countries that has been **experiencing an alarming increase in myopia cases.**

65% of children aged 12 are myopic in Singapore. This issue has been attributed to various factors, including the country's urbanization and lifestyle changes that involve **increased screen time** and **decreased outdoor activities**.

High myopia puts one at risk of many eye disorders later in life, such as **early cataracts**, **glaucoma** and **macular degeneration**.

10 Clinically Researched Eyecare Nutrients

Lutemax® 2020

This patented ingredient consists of 2 antioxidants, Lutein and Zeaxanthin. Together, they help to filter harmful blue light rays and protect eyes from oxidation damage.

As our bodies cannot produce the Lutein and Zeaxanthin we need. We obtain them through our diet or nutritional supplements. Lutemax® 2020 is naturally derived from marigold flowers.

Clinical Study
48 young adults who spent at least 6 hours daily looking at screens from a distance of 3 feet or less were randomized to receive a daily pill containing Lutemax 2020 supplementation or an identical-looking placebo (pills with no Lutemax 2020) for 6 months.

Result: At the end of the study, the subjects showed significant improvements in visual performance measures and sleep quality. Additionally, there was a significant reduction in the frequency of headaches, eye strain and eye fatigue.

Reference: Stringham, et al. (2017). Foods 2017, 6(47).

Vitamin A

Beta-carotene is found in the macula lutea of the retina. It supports macular and retina health.

References: Michael, et. al. (2020). Elsevier, Inc.

Astaxanthin

Astaxanthin is a potent antioxidant that prevents oxidative damage to eye cells. Promotes retinal blood flow.
40x stronger than Carotene
50x stronger than Vit E
6000x stronger than Vit C

Clinical Study
In a double-blind, randomized placebo-controlled study, 2 groups of 18 volunteers each were given 6mg of astaxanthin daily or a placebo for 4 weeks. After 4 weeks, the researchers checked the retinal capillary blood flow, blood pressure, blood cell counts, fasting plasma glucose level and intraocular pressure.

Result: The group that took astaxanthin showed significantly better blood flow in their eye vessels ($p<0.01$) compared to the placebo group without affecting the pressure inside the eyes.

Clinical Study 2
In a randomized, double-blind, placebo controlled study, 18 healthy males were divided into 2 groups, one group took a pill containing astaxanthin while the other group took a plabeco. Researchers measured their static and kinetic visual acuity, depth perception (how well they judged distances) and critical flicker fusion (CFF) levels (how tired their eyes felt).

Result: At the end of the study, a significant improvement in both distance judgement and eye reduction in eye fatigue was observed in the group that took astaxanthin ($p=0.05$).

References: Donoso, et al. (2021). Pharmacological Research, 166.

Vitamin C

Contains excellent antioxidant properties and it can help regenerate other antioxidants within the body, including vitamin E. Reduces risk of macular degeneration and cataracts.

Reference: McCusker, et al. (2016). Clinics in Dermatology, 34(276-285).

Zinc

The retina has the highest concentration of zinc of any organ in the body. Zinc improves night vision and enables Vitamin A to produce an eye-protecting pigment, melanin.

Reference: McCusker, et al. (2016). Clinics in Dermatology, 34(276-285).

Bilberry

Contains anthocyanins, an antioxidant which is beneficial for vision because they increase the circulation within the retinal capillaries, improve night vision and restore tear secretion in dry eyes.

Protect retina cells from light-induced damage

Reference: Wang, et al. (2015). Journal of the Science of Food and Agriculture, 95(5), 936-944.

Vitamin B12

Chronic deficiency of vitamin B12 can lead to optic neuropathy and loss of vision. The human body cannot synthesize vitamin B12 and its levels in the body are dependent entirely on dietary intake.

Aids in the formation of red blood cells and nervous system function

Reference: Chan, et al. (2017).

Vitamin E

A fat-soluble antioxidant that protects the retina from UV radiation and oxidative damage. Vitamin E also enhances the antioxidant ability of lutein to protect retinal cells from free radical damage.

Reference: McCusker, et al. (2016). Clinics in Dermatology, 34(276-285).

Lycopene

A potent carotenoid antioxidant protects the eyes from UV radiation and free radical damage

Reference: Melanie, et al. (2020). Food Science and Technology, 127, 109323.

See What Our Parents Say

"Am a repeated buyer! Want to find something for my son as he always stares at his iPad everyday. Tried this myself and I really like the orangey taste. My son eyes also stopped tearing as much from staring at his iPad everyday. It works!"

- j*****m

"My kid likes it, that means it doesn't taste yucky. He takes it as a candy and always requests for more."

-vernif

"Repeat purchase, fast delivery. Already seen improvements with my son's eye health in just 2 months. Will continue to use."

-zangelie

"This is my 3rd time purchase. I feel that it does help on my kids eyesight. Hopefully it will continue to improve their eyesight as now all back to online classes again."

-allycia

"Thanks seller for the fast delivery. This is my second time purchase...Is a good product can helps my son dry eyes problem."

-beckygal

"Heard about this from my neighbour whose son is also taking it. His myopia hasn't increased since taking it. Want to try for my kids too."
