V KICK

UNBEATABLE PUNCH + IMPACT

Custom capsule, versatile sonics, and flexible mounting for any kick drum.

The **V KICK** is the most compact and versatile drum microphone in its class, intended for use with kick (bass) drums and other sources such as miking bass guitar speaker cabinets, floor toms or other large drums where low-frequency energy is of the utmost importance.

Its all-new **custom DMC7 SB dynamic capsule** offers the same technology and features as its sibling in the V7 X instrument mic, but is custom-tuned for the very lowest and loudest tones - and its **supercardioid pattern** helps isolate your kick sound from stage bleed.

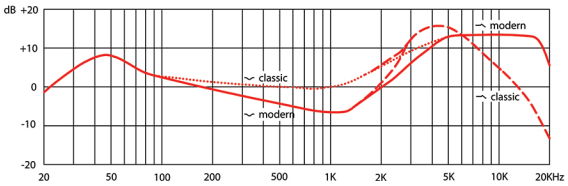
The **advanced internal capsule suspension** also efficiently decouples the capsule from mechanical vibration, isolating it from shocks & jolts and eliminating the need for an external shock mount.

"The V KICK - WOW. It's soooo solid-sounding on the bottom end."
- Eddie Mapp (FOH, Evanescence)

FOUR CUSTOM SONIC VOICINGS

From warm & classic to modern & aggressive - any sound you need.

Two switches on the rear side of the V KICK allow you **four different sound settings**, great for tailoring the sound for your specific project – and ideal for live shows with multiple bands and short changeovers. And since they're on the back of the mic, these switches are still accessible even if the V KICK is placed inside a kick drum. **With the V KICK, you can always make the right choice with just a single microphone.**



LEFT SWITCH: *"Classic" provides a more traditional kick drum sound with a familiar low frequency punch and a warmer, more rounded sound. If a more contemporary, aggressive sound is desired, the "Modern" setting emphasizes the low end and high end (a "scooped" sound).*

RIGHT SWITCH: *"Classic" provides a typical bite in the upper midrange (presence boost) and a more rounded and familiar sound, while "Modern" provides an open, clear and transient-rich top end for a more contemporary, aggressive drum sound - ideal for metal and hard rock.*

PERFECT FLEXIBILITY

The most compact, flexible and versatile kick drum mic on the market.

The V KICK's **extremely low profile** allows for effortless placement outside or inside a kick drum, and its **integrated swivel joint** allows for easy positioning inside (through the drum head port) or outside the kick drum.

And with **the stand mount and the XLR connector mounted side-by-side in parallel** on the underside of the mic, your mic cables stay flush with the mic stand – **no cable clutter, completely minimal footprint, and easy to place anywhere.**

Robust build. Exceptional sound. The V Series for Drums.
