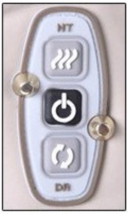
Infrared heating kneading massage head

Having a powerful kneading rotary motor is the most important core component of the massager. The quality of the kneading motor determines the quality, power, energy consumption and service life of the massager. The unique light wave heating function can be used without going out. Give your neck and shoulders a hot moxibustion; two-way rotating massage, you can change the massage direction at the touch of a button.



Power on key

① Plug the power adapter output end into the DC12V input of the hand controller, and then plug the power adapter into the socket. Press the power key to turn on the power and start the massage. Press the forward and reverse buttons to reverse the massage. Press the hot function button once, the hot pack is turned on, press again to turn it off, and then cycle.

② Insert one end of the cigarette lighter into the DC 12V input and the other end into the car. Press the power key to turn on the power and start the massage. Press the forward and reverse buttons to reverse the massage. Press the hot function button once, the hot pack is turned on, press again to turn it off, and then cycle.
