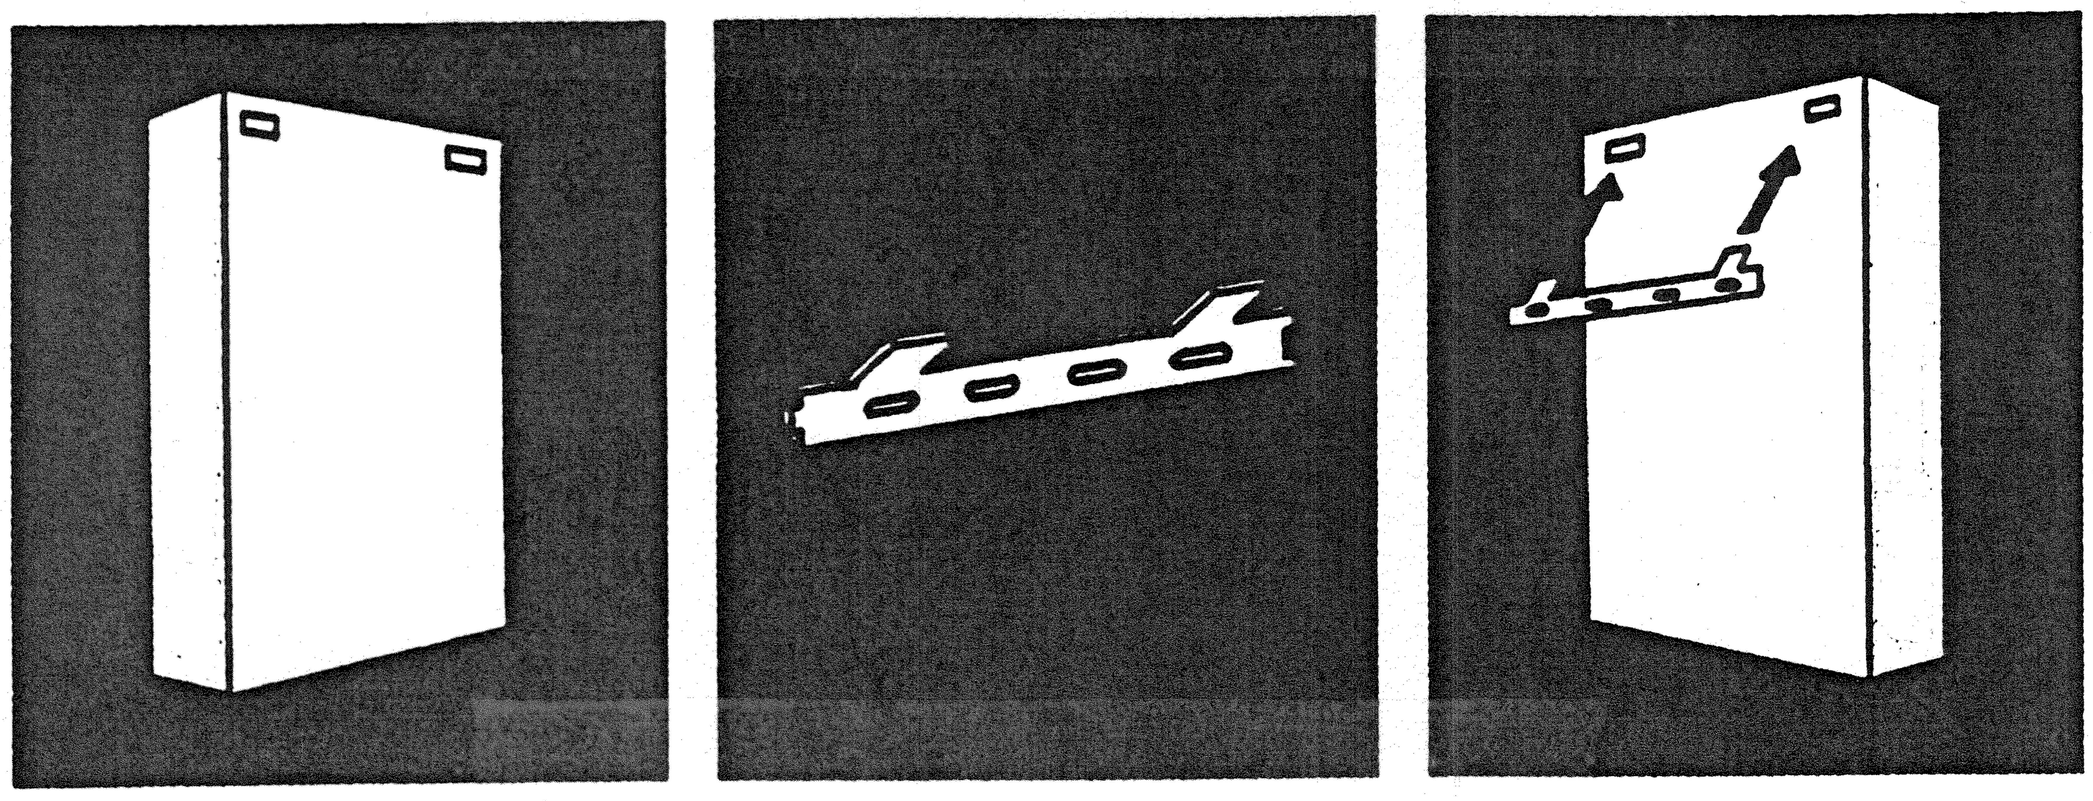
Wall Mounting Your Illuminator

All Trimline and Liberator Series Illuminators come with Wolf's EZ bar wall mounting system. Simply follow the steps below to quickly and accurately mount any size illuminator on the wall.



1. The back of your illuminator already has an EZ bar taped to it. Remove the bar and note the holes that the EZ bar came out of.
2. Take the EZ bar and using a spirit level, mount it on the wall with the flanges on the bar facing out, as shown.
3. Slip the holes in your illuminator over and down onto the EZ bar flanges, and you're done.
