

Hot Springs Heat Shield

THE UGLY

STOP! Read these instructions carefully, from start to finish, to avoid DESTROYING your side panels, bags, etc.

THE BAD

Modern motorcycle exhaust systems can produce incredibly high temperatures – up to 1200° F (650 degrees C)! At these temperatures, few materials can withstand DIRECT CONTACT (touching) without breaking down.

THE GOOD

Even a fraction of an inch of air flow is sufficient to prevent damage to side panels, luggage and other materials.

The Hot Springs Heat Shield by Giant Loop is the simple, inexpensive, universal heat problem-solver for virtually any motorcycle exhaust system.

By properly installing one or more Hot Springs Heat Shields, you can enjoy years of trouble-free riding in even the most extreme conditions.

Trim excess hose clamp on smaller diameter exhaust pipes.

Position Hot Spring Heat Shield between side panel plastic and exhaust. On some newer model motorcycles, the shield may be positioned beyond the side panel to keep the saddlebag from touching the exhaust.

Air will pass through the correctly installed shield and no melting will occur.

Dual exhaust motorcycles require a shield on each muffler.
