

DigiCAM 2.0

The DigiCAM 2.0 is a high resolution digital video camera which connects directly to a PC or notebook via a USB 2.0 connection.

- Plugs directly into computer
- Produces high resolution digital video
- Software allows storage of patient information, still images, and streaming video
- Works in conjunction with new USB powered LED light source
- Works with most existing PCs or notebooks
- Performs with flexible and rigid scopes

Images are viewed directly off the computer's monitor while the DigiCAM 2.0 software allows capturing of still images and streaming video with just the push of a button.

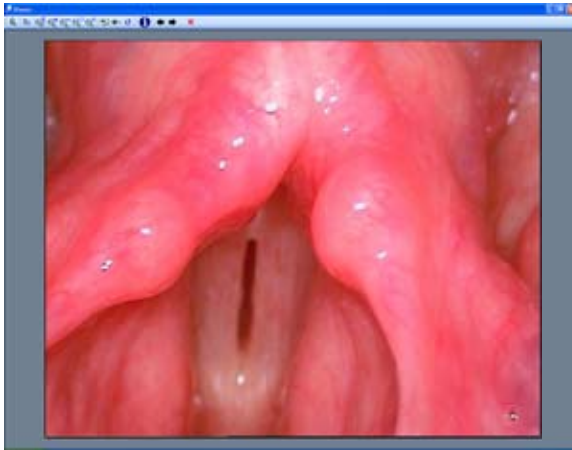

Works with any new or existing rigid or flexible endoscope

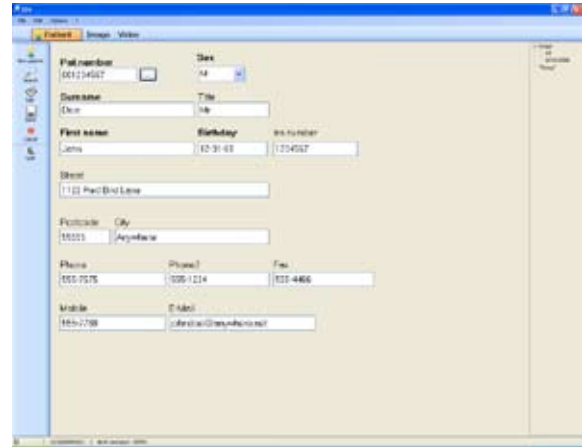

JEDMED
