(A): \$29/person

(B): \$36/person

Workshop (60 min.)

(A): \$21/person

(B): \$28/person

Boys & Girls All Ages

Fairy Houses (A)

Using natural materials including twigs, moss, bark and stones, children will use their imagination to build small fairy houses to take home for waiting fairies.

Favorite Cookie Mix Jar (A)

We will teach children how to measure and layer ingredients for the birthday child's favorite cookie into large Mason jars for a delicious take home treat for baking at home.

Terrariums (A) (B: upgrade to a larger container)

Using Mason jars as containers, we will teach children how to layer rocks, soil and plants. Then we'll decorate with spun cotton mushrooms and tiny creatures to create a miniature woodland wonderland.

Felt Shapes Mobile (A)

Children will use colorful recycled felt shapes and wire to create whimsical mobiles to hang at home.

Beeswax Candle Rolling (A) (B: Upgrade to 2 candles)

With colorful natural beeswax sheets, children will learn how to roll and decorate their own honey-scented pillar candle to take home and enjoy.

Mask Making (A)(B: more elaborate, larger masks)

We'll provide a range of materials and embellishments as well as inspiration for children to create their own fantastical masks. Can be themed based on party: animals, robots, super heroes, fairies, princesses, etc., and are suitable for wearing or displaying on your wall.

Peg People (A)

Using natural wood pegs, kids will design their own person or creature with water-based colors, fabrics and other materials. Each child will create two characters.

Easy Knitting (A)

Using a Lucet, a simple wooden utensil shaped like a fork, kids will learn how to make beautiful long cords using wool yarn with this traditional knitting technique used since Viking times.

Embroidery Wall Hanging (A)

Using stitch friendly, organic burlap, we will guide children in designing their own wall hanging and teach them stitching techniques for embroidering their design. The finished piece will be wrapped around rustic twigs for hanging.

Girls 7-11

Embroidery Stitch Book (B)

Using colorful wool felt as a cover and cotton insert pages for the stitches, each child will learn and practice basic stitches for each page in the book. We will provide embroidery floss and a piece of burlap for each guest to take home to make their own design using what they've learned.

Tea Towel Embroidery (A)

We will guide each child in personalizing a tea towel using basic embroidery stitches for a fun take home gift.

Fabric Flower Hair Clip or Pin (A)

Children will design their own petal templates and then cut fabric swatches from our collection to create a blooming flower with simple stitch work. Flowers can be worn as hair clips or pins.

Pom Pom Crafts (B)

Using colorful yarns, children will learn how to create their own pom poms to make an adorable gnome. They will then adorn him with a wool felt hat they've cut and stitched themselves.

Paper Flower Garland (A)

We'll teach children how to create intricate paper flowers using recycled papers and then string them together for a beautiful garland to adorn their rooms.

Felt Ball Cascade Wall Hanging (A)(B: Upgrade to a larger wall hanging)

Using wool felted balls, we'll teach children how to string and hang the colorful spheres onto a twig for a wonderful wall hanging.

Girls 12+

Finger Knit a Scarf (B)

In this introduction to knitting, teens will use chunky, colorful yarns to create a cozy scarf finished off with pom poms.

Felting (B)

Teens will learn basic felting techniques to create a ball or simple animal using high quality wool felt.

Boys 7-11

Duct Tape Wallets (A)

Using a variety of colorful duct tape, we'll teach kids how to make a useful, unique and fun wallet.

Wooden Boats and Cars (A)

We will teach children how to design and build their own working vehicle to take home.

Seasonal

Most of our projects can be customized to a theme, season or upcoming holiday. Please let us know your thoughts!

Materials

We use high quality, sustainable, natural, non-toxic materials as much as possible.

Custom

If you are looking for something different, we are experts at coming up with unique alternatives. Our development fee is \$120 per project and covers conception, training and acquisition of new materials. The per person project fee will be determined based on materials and complexity of the project.
