Innovative Next Generation Products, Inc. Certified as a Woman-Owned Business Enterprise

INGP, Inc. has received certification as a Woman-Owned Business Enterprise (WBE) through the State of Wisconsin Department of Administration. The designation is pursuant to the state administrative rule requirements of Adm. 83 which provides validation that INGP, Inc. meets the requirements of being at least 51 percent woman-owned, controlled and managed. It qualifies INGP, Inc. to be considered for contracts with corporations and government entities that seek vendor relationships with businesses owned and operated by women.

INGP, Inc. was established in 2009 and manufactures a patented flocculant absorbant/deactivator product called Floc-Off™. Flocculants are used extensively in the water treatment industry to aide in the separation of solids from liquids. Flocculants are messy to use and very difficult to clean-up when spilled or misplaced. Flocculants are hydrophilic (the more water that is added to it, the more slippery and tacky they become). This creates a challenge when repairing equipment associated with the use of flocculants or cleaning up a flocculant spill created by a process leak, batch mixing or product transfer, since hands and tools become very slippery and floors become hazardous creating a safety issue.

Floc-Off™ is a patented product that safely and effectively removes all types of flocculants (anionic, cationic, or nonionic) utilizing the principles of absorption and adsorption. It is a non-hazardous, "all natural" (green) product that can be safely used and disposed of in the trash when cleaning-up a spill or washed down a drain when cleaning hands, clothes, tools, equipment, etc.

For more information on Floc-Off™, contact Marta Broge at INGP, Inc. at 414-430-0391 or visit the website at www.flocoff.com.
