

# FASHION STYLING

## With the Color Wheel

### WHY USE IT?

The Color Wheel is used in basic color theory by stylists, designers and artists to create color schemes.

#### COMPLIMENTARY

Colors on opposite sides of the wheel are Complementary.

(Ex: blue and orange, or purple and yellow)

#### HARMONIZING

Colors neighboring on the wheel are called Harmonizing Colors.

(Ex: red, burgundy and maroon)

#### Monochromatic

A unified, one-color scheme - using that color's various tints, tones and shades - is called Monochromatic.

### HOW TO USE IT

Follow the connecting lines on the color wheel to match complimentary colors.
