

# Installing the MagicShine Helmet Mount

*Brought to you by [www.action-led-lights.com](http://www.action-led-lights.com)*

The helmet mount comes with 2 sided Velcro like straps were the top side will stick to the bottom side. The straps are extra long to accommodate all mounting situations.

Installing the mount:

1. Choose the location on the helmet were you wish to install the mount. This can be on the top or front of the helmet.
2. Run the straps across the top of the helmet and into a vent which is lined up with the chosen location.
3. Route the strap through the inside of the helmet coming back through a vent near the mount and then through the inner slot on the mount.
4. Bring both straps to this state and then pull both straps up and to the outside to tighten the straps and center the mount.
5. Press the bottom of the loose end against the top of the strap to secure.
6. Tuck the extra if any into the helmet or trim to length.
