BIOTECHsis® 'IN BED' SYSTEM

*This simple product provides the optimum level of due diligence currently available and significantly contributes to a safer and cost effective approach to three major problem areas present in health care provision today, **manual handling, hospital acquired infections, and tissue viability.***

WHAT is the BIOTECHsis® system?

- A multifunctional system consisting of x2 bed sheets and x1 bed mattress cover.
- Replaces existing bed sheets.
- Acts as a slide sheet/repositioning aid/transfer aid.
- Is an effective barrier against hospital acquired infections.
- Aids tissue viability.

WHERE to use the BIOTECHsis® system?

- Suitable throughout care homes and nursing homes.
- Hospices.
- Home care.
- Acute hospitals.

WHY the BIOTECHsis® system?

- **Reduces back injury in carers.** This is an easy and effective slide sheet system promoting best practice. There is a reduced need for other handling equipment and minimum disruption to the patient.
- **Significantly reduces the risk of hospital acquired infections.** The permanent *See it Safe* fibres kill 99.9% of bacteria within one hour of contact, including MRSA.
- **Helps prevent tissue breakdown.** Sheets are ultra-low friction and thermodynamic, preventing skin friction and excoriation. When used on a profile bed the sheets also help prevent skin stiction.
- **Comfort for the patient.** The sheets are made of soft, lightweight, thermodynamic, anti-static, anti-linting material ensuring patient comfort.
- **Cost effective.** Reduces the need for other handling equipment, reduces the incidence and associated costs of hospital acquired infections/pressure sores and is re-usable and self-sanitising. In addition, it is a cost effective and environmentally friendly alternative to disposable sheets/slide sheets.
