

Walking Naturally Has Never Been Easier

VACOCast Low Rise offers a unique hinge mechanism that preserves patient's natural gait. This feature combined with VACOCast's patented *Vacuum Relief* creates an unrivaled experience in comfort and control. Patients feel as though they are wearing a normal shoe.

VACOCast's *Vacuum Relief* insert **works by sucking all of the air out** to allow microbeads to perfectly, and gently, mold to the limb. With no inward pressure, VACOCast can be worn immediately post-surgery. Our "perfect fit" can't be matched, **just try one on and experience the difference of vacuum.**

Beyond Comfortable!

Natural Gait

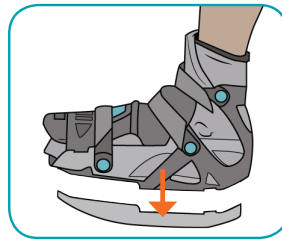

Easier for patients to walk.

Adjustable Toe Plate

Extendable to protect toes.

Detachable Sole

For best hygienic practices.

It sucks!

That's how it works.

In this example, air is forced out of a container to form a perfect mold of the hand. VACOCast uses this same principle to create a perfect fitting orthopedic boot, unmatched in its stability and comfort by any other boot on the market.
