

Customized Vitamin Formulas

NutriChem Compounding Pharmacy and Clinic values the importance of a person's biochemistry in order to achieve optimal health. Through an extensive test called the Body Chemistry Balancing Test, NutriChem is able to identify the nutritional deficiencies specific to an individual. With the help of a clinician, a custom formulated vitamin and mineral formula is created according to a person's needs.

The custom formulas are available in capsules or powder. All custom formulas are made without fillers, dyes or preservatives. Natural flavouring is available upon request.
