"We Make House Calls!"

Your Prescription

Your doctor has prescribed a continuous passive motion device (CPM) from J.I.M. Medical to assist you with your rehabilitation.

CPM has been shown to improve post-operative range of motion, allowing for a faster recovery from your surgery. CPM can help to reduce the formation of adhesions in joints and can assist in the healing of damaged tissue and cartilage. Studies also show that CPM use can decrease pain and swelling, and reduce the need for pain medication following joint surgery.

A J.I.M. Medical representative will deliver and set up your CPM machine for you in your home. You will be instructed on how to use the CPM according to your doctor's orders. Elbow CPM units are generally used while in a seated position.

How CPM Works

To allow for proper healing after some surgeries, you may be restricted from weight-bearing. You may also be restricted from performing active range of motion (using your own muscle-power to move the joint) with the affected joint for a period of time following surgery. In other cases, post-surgical pain and swelling may prevent you from obtaining full range of motion without assistance.

The CPM moves your limb to provide range of motion of the affected joint(s). Since the CPM machine is doing the work, we call this **PASSIVE** range of motion. Passive range of motion is a safe and effective way to reduce pain and swelling and safely move the joint following many orthopaedic surgical procedures. It allows for proper healing while ensuring that the joint does not get stiff and develop adhesions. You will be instructed how to increase the range of motion according to your tolerance or your doctor's orders, so you are in control of your therapy. In most cases, it is appropriate to feel a gentle stretch while using the CPM.

Completion of CPM Use

When you are finished with your CPM therapy, please call J.I.M. Medical. It is extremely important that you call our office when you complete your use of the CPM so that we can stop your billing. You may call 24 hours per day, 7 days per week. If it is outside of normal business hours, you can leave a message in our after-hours voice mail.

Cold Therapy

Your doctor may also prescribe a Controlled Cold Therapy (CCT) unit for use following surgery. A CCT unit provides continuous, temperature-controlled cold therapy to the affected area. Ice water is circulated through insulated tubing to a pad or "bladder" that is placed over the affected area and secured by elastic Velcro straps or an ace bandage. It is often used continuously at night for the first several days following surgery for pain relief. Studies show that CCT can decrease pain and swelling, and reduce the need for pain medication following joint surgery.

Insurance Information

Joints In Motion Medical will contact your insurance company to verify your benefits and try to obtain authorization for your CPM. Insurance plans each have distinct guidelines for coverage regarding CPM.

We are a local company and we're in-network with most plans. If we are not listed as a provider with your plan, in many cases we can make arrangements to obtain in-network benefits on your behalf. *

In cases where insurance coverage is not available, J.I.M. Medical can offer discounted rates and monthly payment plans as necessary to ensure you access to the product your doctor has prescribed for you.

* While we strive to obtain in-network benefits whenever possible, we cannot guarantee that we will be able to obtain in-network benefits in all situations.
