

Overview

Available in wired and wireless, the EKB keyboard has all of the essential features of a regular keyboard, without the numeric keypad. The numeric keys on the right side of a full size keyboard makes the mouse sit too far away and your right arm too extended. Eliminating the right side numeric keys not only saves space, your mouse can get closer so your arm is more relaxed.

Key Features

Full size arrow and F1-F12 keys
The arrow, F1-F12, PgUp and PgDn keys are full sized, unlike other compact keyboards which have those keys in smaller sizes.

Tactile bumps facilitate touch typing
Tiny bumps on selected keys facilitate touch typing. Other keyboards have bumps only on the F and J keys.

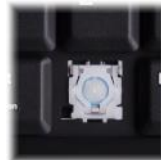

Extremely low profile aids comfort
The back edge is not tilted up so the entire keyboard is fully flat to eliminate hand strain.

Twelve one-touch hotkeys
Hotkeys provide one touch operation for Undo, Cut, Copy, Paste, Web, E-mail, Mute, Vol Down, Vol Up, Sleep, and Turn Off.

No Fn key necessary
All functions are each accessible with one key, other compact keyboards require pressing a Fn key simultaneously.

High quality scissor keys
Precision scissor keys provide crisp action and good feedback.
