## Constrictor Cargo System

- One net system, fully adjustable to 96"
- Ratchets for mechanical advantage
- Attached self-storage system
- Easily identifiable sides
- Conveniently located carrying handles
- Minimal failure points
- Minimal maintenance
- Minimal personnel required for assembly

Top View: Constrictor Cargo System sitting on top of cargo and oriented correctly.  
30"L x 30"W x 12"H

MADE IN THE USA

Bottom View: Carrying handles.

Top View: Long Side, Short Side, Individualized Company Logo and Instruction panel.

Corner View: Proper orientation of Constrictor Cargo System

\*Patent Pending

## Product Description:

The Constrictor Cargo System was developed over many years and multiple prototypes to address the multitude of deficiencies experienced with the current nets. The easily identifiable sides ensure that the net is oriented and attached correctly the first time to prevent extra work. Additionally, the adjustable straps are connected with ratchets, giving the user a mechanical advantage to ensure that cargo stays secured during flights and within size limits. The net is designed to accommodate all size loads without having to remove or add additional pieces. By reducing the amount of hardware on each net, our design minimizes not only failure and maintenance points, but also overall cost with no loss of cargo capacity. Furthermore, each piece of hardware was hand selected with the end user in mind to provide adjustability without sacrificing cargo security during flight.

- More efficient
- Less hardware
- Fewer Personnel
- Self-Contained

Price: \$3000.00

Corner View: Constrictor being deployed from the self-storage bags.

Corner View: Short & Long Sides with ratchets for vertical adjustments. On the corner are the horizontal adjustable straps with ratchets.
