Control No. 3120734

300 gallon waste oil storage tank

With the ONLY built-in containment system, this tank is engineered specifically for waste petroleum oil. The inner containment where new oil is first placed provides time to settle out water & sludge. Used with the floating pickup assembly, the best possible oil is provided to your waste oil burning appliance. Four top openings and two bottom openings allow for annual drainage. Heavy duty support brackets hold your waste oil burning furnace for an attractive and convenient turn-key installation.

INOV8

In keeping with INOV8's tradition of innovation and attention to detail, our waste oil storage tanks have been engineered specifically to handle the unique requirements of waste petroleum oil products. Their superior design and industrial grade construction allows for ease of installation, simplicity of use and long life. The list of standard features includes:

- Extra large 300 gallon capacity—allows more time for sludge and water to settle out.
- Internal settling reservoir—a separate chamber inside the tank body that facilitates settling of sludge and water before oil flows into the main portion of the tank.
- Attractive and durable industrial powder coat finish applied to all external surfaces.
- Easy to read oil level gauge and oil supply and return lines that connect to the INOV8 burner are included.
- Facilitates easy installation of INOV8 furnaces—all that is needed is the chimney, compressed air and electrical hookups.
- Integrated furnace support brackets, made of heavy gauge 2" square steel tubing to position furnace at desired 8' above floor.
- Constructed of heavy duty 11 gauge on the sides and 10 gauge on the top of the tank.
- Four 2" openings on top to accommodate: vent pipe, oil fill, oil level gauge and burner supply line.
- Two 3/4" threaded cleanouts on lower side of tank allows for convenient draining of accumulated sludge and water. One for each portion of the tank.
- Tested and listed by Intertek ETL-Semko to UL80—standard for oil storage for use in the United States and to CAN/ULC-S602-03 for use in Canada.

Photo shows a completed installation of a model F240 mounted on an INOV8 model T300 tank with a chimney, oil lines and gauge. Note that the brackets have been shortened.

Model T300 with Stands

Specifications

Model	Weight	Dimensions—L, W, H
T300 HB (for F125 & F240)	450 lbs.	60", 34", 37"
T300 FB (for F450 furnace)	475 lbs.	60", 41", 32"

INOV8 Tanks matched to furnaces, boilers, water heaters & evaporators provide unlimited economic options for safely and effectively storing your waste oil and settling out the sludge and water. Custom sized tanks are available to accommodate outdoor or double wall requirements.
