

# your sustainable development

our products, from design to use, are working for you ... and for tomorrow.

## thinking recycling now

### recyclable aluminum and wood

Our lecterns are made of aluminum, a recyclable material produced regionally, and wood, a recyclable resource as well.

## doing our part, together

### flat shipping

Delivered flat in smaller boxes, our lecterns are ready for assembly. By taking care of the assembly yourself, you allow us to ship more boxes at once in each truck and to minimize overall warehouse needs.

## offsetting the carbon

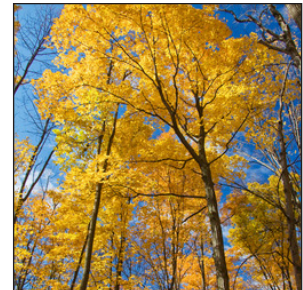

### we plant trees to offset carbon

You do not contribute to global warming because all our products are carbon neutral, a feature nevertheless still rare today.

## reforesting the planet

### replanting for you

You renew our forests as we take charge of replanting the wood used on our lecterns on your behalf.
