

INFLATION

1) Unroll the Board: Lay the board flat with the grey inflation valve unit facing up, fins facing downward. Remove the white fin guards.

2) Close the Valve Stem: Remove the valve unit cap on the board.

- To inflate, make sure the red valve stem is locked to keep the air in (up position).
- If the valve stem is down and air is releasing, turn the red valve stem counter-clockwise so it will come up.

3) Assemble the Pump: Lift the pump handle up to the highest position.

- With the pressure gauge screen facing the ground, turn it clockwise, so the gauge is face up by the time it is tightened.
- Screw the yellow hose into the pump.

4) Secure Hose to Board: Push the hose into the air valve, and twist clock-wise until you feel it lock.

- Confirm that the grey male end of the hose has one black rubber washer, and it has the split edge facing up.
- If the smooth edge is facing up, simply flip the black rubber washer over and securely fit it back into the grey male end of the hose.

5) Inflate Board: Pump air into the board. Take note that the pressure gauge may not register air until the board reaches 10 PSI. Board will take form in 4 mins/100 full pumps. Once the desired PSI is reached (15 PSI = 225 pumps), remove the hose to replace the valve unit cap.

5b) Tighten the Valve Unit: If the valve unit is loose it may leak air.

- Insert the grey crown wrench (from the repair kit) into the valve securely
- Turn the wrench clockwise to tighten the valve. The leaking sound will stop.

8) Insert Master Fin: Flip the board over and insert the center fin into the crevice. First time installment of the fin requires a little more force to secure. Lock the find in place.

9) Connect the Paddle: Attach the paddle to your desired height.

10) Take your SUP to the Water!

DEFLATION & STORAGE

1) Remove the Master Fin: While the board is still inflated, lay the board with fins facing up. Unlock the master fin, and slide the fin out completely. Store it in the Duffle Bag front pocket.

2) Clean & Dry the Board: With the valve unit still closed, rinse off the board with fresh water. Dry around the valve unit with a towel. Allow the red EVA pad to dry thoroughly before rolling for storage.

3) Activate the Auto-deflate: (1min) Remove the valve unit cap.

- FIRST push down on the red valve stem for 10-seconds to “burp” the pressure inside the board before turning the valve into the Down/Release position. *(If this step to “burp” pressure is not done, the strong air pressure can rupture the valve’s internal washer.)*
- Then, turn the red valve stem counter-clockwise (down position) to release air when pushed in. Air will deflate rapidly when the valve is released, so it’s recommended to keep your face away from the valve opening.

4) Roll the Board: (2min) Starting at the opposite side of the valve, fold 3-inches over and roll the board as tight as you can up to the valve. Then wrap the belt around the rolled board, fasten the buckle.

5) Close the Valve Stem & Unit: Once the board is fully deflated, turn the valve stem counter-clockwise to the Locked/Up position. Replace the valve unit cap.

6) Return items into Storage Bags: **PUMP** Disconnect the hose from the pump. Put the pump and hose into the pump mesh bag.

PADDLE Detach the handle from the paddle shaft, store in Duffle Bag.

MASTER FIN Store the Master Fin in the Duffle Bag front pocket.

BOARD Stand the board up on its side. Cover the board with the Duffle Bag mouth pointed to the ground. Holding the straps, flip the Duffle Bag up so the board enters the bag fully. Put the PUMP Bag into the Duffle Bag.

INSTRUCTION MANUAL

Thank you for choosing XTERRA Boards!

You have purchased the lightest & most durable brand of SUPs.

Package Contents:

- Inflatable board
- 3-part Aluminum Paddle
- BRAVO pump
- BRAVO pressure gauge
- BRAVO hose
- Skeg
- Repair kit (valve wrench, patches and glue)
- Pump Bag
- Duffle Backpack

Care & Storage Tips to Lengthen the Life of your Board:

- Protect it from the Sun: Avoid excess heat and direct exposure to the sun when not in use (i.e. avoid baking in hot vehicle). If the board must stay in the sun, drape a towel over it, or find some shade for it.
- Rinse your XTERRA Board with fresh water after each use. Allow the EVA foam pad to dry thoroughly before storing
- Roll the board from the tale end to the valve end, allowing the board to deflate completely.
- Store in a dry, cool place with the fins facing outward in the Duffle Bag.

30-Day Refund Policy: If you wish to return your SUP Package for a refund, please complete the 30-Day Refund form on our website and include it in your package. You are responsible for return shipping to XTERRA Boards.

1-Year Manufacturer Warranty & Repairs:

XTERRA Boards are warranted on all manufacturer defects for one year starting from the day after you receive your board. XTERRA Boards retains the right to repair or replace valid warranty claims at their discretion. Once a Warranty Claim is approved, you will receive a pre-paid label to return your board to be repaired at our cost. Manufacturer defects covered include stripped valve, unglued or faulty seams, and deformations. Clear abuse or poor care is not a manufacturer defect.

XTERRA Boards are warranted on Repair Kit material refills for 5-years starting from the day after you receive your board. We include a Repair Kit in your Package with patches, glue and a wrench because minor damages can be easily repaired. For severe damage, we reserve the right to give you an estimated cost and have you pay that amount. Find detailed videos on how to make a repair on our website. So long as the tear is not from clear abuse and not larger than 4 inches, we'll send you all the materials needed to make the repair.
