

Protection Wear Sizing

EVOC's Protection Wear is built upon the CE-certified Liteshield Technology protection system. Because of the integrated protection it is critical to ensure that each item of Protection Wear fits appropriately. EVOC offers several sizes too allow each rider to be able to take full advantage of the protection of the item. Follow these steps to find the correct size for you.

1. **Find your total height in centimeters** (inches x 2.54 = cm)
2. **Find your torso length in centimeters.** To do so, you'll need a friend and a flexible tape measure.

- a. Have your friend locate the bony bump at the base of your neck, where the slope of your shoulder meets your neck. This is your 7th cervical (or C7) vertebra. Tilt your head forward to locate it more easily. This is the top of your torso length.
- b. Place your hands on top of your hip bones (also known as your iliac crest), with fingers pointing forward, thumbs in back. This is the "shelf" on which your pack will rest. The middle of an imaginary line drawn between your thumbs is the bottom of your torso length.
- c. Using the tape measure, your friend should measure the distance between the C7 and the imaginary line between your thumbs. Be sure you stand up straight when being measured. You now should have your torso length.

3. **Use the measurements you find and determine from the chart below the size that will fit best.** Please note that the Torso Length is the key measurement and if there is a discrepancy in lengths between your Torso and Overall Height we recommend going with the size that corresponds to your Torso Length.

torso length (a)	chest amount (b)	vest size
38cm - 43cm	82cm	S
44cm - 50cm	86cm	M
44cm - 50cm	90cm	L
51cm - 56cm	94cm	XL
