

Thank you for choosing Eve - our hypnotically musical tremolo pedal.

We are sure that by following the simple instructions outlined in the next few pages you will enjoy years of pulsing tremolo joy.

Please read on to discover how to get the best from her.

Be sure to peruse the section about pedal registration. Simply register online and automatically gain the extended warranty - plus you'll be in to win some truly excellent prizes.....

Bliss!

Best Regards,

Ben Fulton

(Owner and inventor)

Initial Charging.....

Such a simple process.....

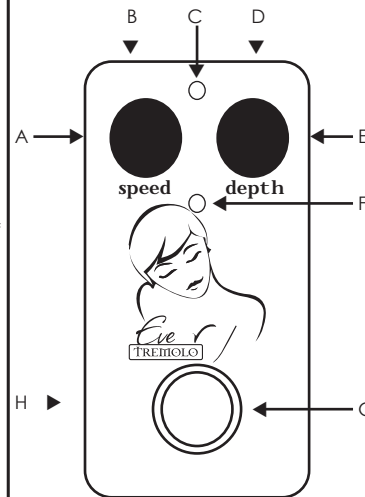

Step One

Locate a DC, 9 volt power adapter with the tip negative (Boss PSA, Voodoo Labs Pedal Power II, Godlyke Power All - pretty much any 9v guitar power supply), connect the 2.1mm plug to the power socket on the left hand side of Eve.

Step Two

The LED closest to the top of the pedal should be glowing red. Leave her charging for 12 hours - the LED will change from red to green - indicating that charging is complete. Following this initial long charge she will only need 4 - 6 hours for future charging cycles.

The Controls.....

A -Speed control - this sets the pulse rate.

B -Output socket.

C -Charge indicator LED
Red = charging
Green = charged
Flashing = battery failure (replace battery immediately).

D -Input Socket.

E -Depth - this sets the intensity of the tremolo.

F -Status LED
Red = pedal engaged.

G -True bypass footswitch
Stomp on here to engage the pedal.

H -Power input - 2.1mm 9 volt DC, tip negative
You can run Eve with the adapter plugged in.

First time.....

(After completing the initial 12 hour charge)

Plug your guitar into the input socket (D on Diagram).

Plug your amp into the output socket (B on Diagram).

Set Speed at 9 o'clock position and Depth at 7 o'clock position.

Step back.

Step on Footswitch.

TREMORAMA!!!

Dial up your own preferred setting of throbby trem!

Note 1: Both dials work in reverse. They're special.

Note 2: Always pull the plug out of the input socket when not in use - this turns off the battery = weeks and weeks of battery life from one charge!

Secret, internal gain tweak.....

Remove the four screws in the back of Eve.

Locate the black trimpot on right hand side of her circuit board.

Adjust to taste: set the gain of the tremolo anywhere you like - unity, boosted or cut.

Standard factory setting = unity

(Do not touch any other internal parts)

Caring for Eve.....

Clean her with a soft cloth, allow no abrasives near her lovely body.

Over time her art work may wear off, be prepared for this! Ensure you have enough canned goods and fresh drinking water.

The Lithium ion battery inside her should last around 2 years. To change the battery, simply remove the four screws on the back plate, unclip the old battery and plug in the new one. Replacement batteries are available from your favorite Red Witch store.

Do not treat her rough - this includes immersing her in beverages, rewiring her, setting her on fire or using her as a weapon.

She's tough, but everything lasts longer with a little love.

Warranty.....

All electronics carry a lifetime warranty providing the owner purchases the pedal new and retains proof of purchase.

All switches, jacks, potentiometers and other mechanical parts are warranted for one year after the date of purchase or for four years if the pedal is registered online (see last page of this manual). This is non transferable.

All external fixtures, finish, lettering and knobs are not warranted. Damage or failure of product due to misuse will void the warranty. All repairs must be made by Red Witch authorized repair agents only.

No user serviceable parts inside.

Unauthorized repair/modification will render warranty void - in the unlikely event that she has a problem - let us fix her!

warranty@redwitchanalogpedals.com

Register her.....

Simply go online and register your pedal to gain an instant 4 year extended warranty.

www.redwitchanalogpedals.com

By registering you gain access to our members only Red Witch forum and the opportunity to win free pedals & other treats! That sounds rather good? Yes!!

Be sure to join "like" us on Facebook - more opportunities to win free pedals, stickers, t-shirts and other delightful goodies.
