EF105-DRUM THING Operation Manual

Congratulations on your purchase of the Electro-Faustus EF105 Drum Thing!

The EF1015 is an electronic drum in its most primitive yet satisfying form.

- OPERATING INSTRUCTIONS -

The Drum Thing requires NO batteries/power.

Connect your amplifier to the OUTPUT jack.

Begin tapping on the EF105. You should begin to hear percussive sounds coming out of your amp.

To avoid feedback, stand at least 5 feet from the amp. *Why would you want to avoid feedback though?*

Feel free to experiment with any and all effects at your disposal. Adding reverb and delay will add a lot of depth to the sound.

- HOW IT WORKS -

The Drum Thing exploits a well known phenomenon called "The Piezoelectric Effect". This is where a crystal/metallic disc is used to pick up mechanical vibrations. Those vibrations are then converted to electric signals which can be translated by your amp or computer.
