

# XIT 404's VIDEO TRIPOD BRACKET FOR LIGHT AND MOTION BLUEFIN HOUSINGS MOUNTING INSTRUCTIONS

Thank you for purchasing Xit 404's Video Tripod Bracket for your Light and Motion Bluefin housing. Below are instructions to help you prolong the life of this product.

## Video Tripod Bracket Mounting Instructions

1. Assemble all the parts you will need on a flat surface: your housing, hardware and pod locker kit, Video Tripod Bracket, and corrosion inhibitor such as Lanapro or Lanocote (not supplied).
2. On the bracket are two set screws. Remove them and apply a small amount of corrosion inhibitor on each and thread them back into the bracket.
3. Remove the back cover from your housing.
4. Orient the bracket so there is one Ball Adaptor on each side, and one towards the back of the housing.
5. Slide the housing onto the bracket. Align the two channels on the bottom of the housing with the front two tabs on the bracket (you can see the channels at the back after you remove the cover).
6. Slide the housing towards the rear Ball Adaptor, and align the channels with rear set of tabs. Continue to slide the housing until it is roughly centered on the bracket.
7. Turn the housing and bracket upside down and tighten the two set screws using your fingers until they stop. Then with the hex key provided, tighten the set screws one turn. This should be enough to hold the bracket onto your housing. **DO NOT OVER TIGHTEN!**
8. Replace the housing back cover.

**IMPORTANT:** You need to use corrosion inhibitor on the screw threads, we recommend Lanapro or Lanocote (not supplied). Be sure to disassemble the tripod bracket from the housing after each diving trip and clean it of any salt buildup or corrosion.

# Xit 404'S TRIPOD BRACKET MAINTENANCE AND WARRANTY

## **Maintenance Instructions for all Xit 404 Tripod Brackets:**

Proper maintenance of the Tripod Bracket and its parts will ensure a long life and is required for warranty coverage. This includes rinsing in fresh water after each dive, removing any salt build-up when found, disassembling the tripod bracket from the housing after each dive trip and cleaning in fresh water. Use a salt remover as needed to clean any deposits.

The Ball Adaptors have been locked to the tripod light bracket using jam nuts and should not be removed. However regularly inspect to ensure they are tight. If they become loose then remove, clean, apply corrosion inhibitor (such as Lanopro or Lanocote, not supplied) and use the jam nuts to lock the screw threads. Check the O-Ring for wear or cracking and replace as needed.

We recommend liberal use of a corrosion inhibitor (such as Lanapro or Lanocote) be applied to screw threads. Failure to use a corrosion inhibitor may damage your camera housing.

## **Warranty Policy for all Xit 404 Tripod Brackets:**

Tripod Brackets are warranted against manufacturer defects for 1 year starting from date of purchase. The warranty is non-transferrable and does not cover failures from abuse or misuse. Warranty does not apply to O-rings and mounting hardware kits. If Xit 404 determines that the equipment was damaged due to abuse or misuse the warranty is no longer valid. Warranty is voided if the product is not properly maintained in accordance with Xit 404 instructions. Proof of purchase from an authorized dealer is required for all warranty claims.

## **A special note about corrosion**

Aluminum, Stainless Steel, Brass, and other metals interact with each other to a greater or lesser degree in the presence of water. Liberal use of a corrosion inhibitor between these metals will help minimize corrosion. Xit 404 also coats its metal parts to help minimize corrosion - this just slows it down but does not stop it. Direct contact between these metals will cause corrosion and Xit 404 does not warrant against this effect. This can happen due to wear, chipped coatings, scratches, or dents in the coatings caused from normal use and/or lack of a corrosion inhibitor. Through proper care and maintenance you can slow corrosion significantly and prolong your underwater gear.

## **Video Tripod Light Brackets - Use with Light and Motion Battery Pods**

<b>Product Description</b>	<b>Product Codes</b>
