FEATURES:

- Default SET temperature 57° F/14° C (ideal for wine storage).

- Calibration option of the temperature sensor.
- Display of actual temperature by request.
- SET temperature range 52°F-64°F.
- Digital temperature sensor.
- Dual display F°/C°.
- Settings are stored in memory for power failures.
- Pre programed software will reach the quietest most efficient operation.

## OPERATION:

- The display will show the detected temperature until the temperature will fall within 3° of the SET POINT.
- If the temperature is above the default 57° F + 1° or other preset value, after a **delay of 1 minute** the fan will start, followed by the compressor within the next minute.
- The unit will cycle ON/OFF based on the temperature reading. Fan speeds are automatically set by the controller to achieve optimum performance.
- Minimum ON and OFF cycle times are imposed by software, to prevent "short cycling".

## SAFETY FEATURES:

ALARM:

- If the temperature exceeds 72° F the unit will shut down, a sound warning will start and the dispaly will blink alternating with the temperature reading.

- This function is disabled in the first 4 hours "Cool Down" period or after any reset for another 4 hours.
- The unit will restart and continue the cooling and cycling if the temperature falls below 72° F.

TO RESET: - Unplug and re plug the unit.
