

GET PLUGGED-IN!

CONNECTING EVERYONE WITH TFS

SmartOffice4TFS is the missing link in the Application Lifecycle Management (ALM) process, bringing TFS functionality and connectivity into Microsoft Office.

provides stakeholders with SmartOffice4TFS а direct, two-way connection between Microsoft Office and TFS via plugins for Word Visio, Excel and Outlook.

SmartWord4TFS is a Microsoft plugin that enables you to seamlessly integrate Microsoft Word with Team Foundation Server.

It makes collaboration easier by giving all stakeholders access to Smart documents and the ability to author, review, edit, and discuss work items and create reports simultaneously.

Document template can be customized to your specifications.

With SmartWord4TFS you can easily:

- Access any TFS process templates.
- Create and manage work items within Word.
- Get work items from TFS into Word queries.
- Author requirements for one project and then connect the document to another project, thereby reusing common work items.
- Author SmartWord templates in multiple languages.
- Define default properties in SmartWord templates.
- Incrementally publish work items from a SmartWord template and refresh content in Word from TFS.
- Generate reports and specifications.
- Standardize requirements document templates.
- Share documents with external reviewers/approvers; with discussion and rating of each item.

SmartVisio4TFS provides seamless integration between Microsoft Visio and Visual Studio Team Foundation Server. Designed to work with any type of diagram and model, it enables you to link work items to individual elements in the diagram. It also provides a visual status of requirements, along with analytics.

SmartVisio4TFS can process your flow diagrams and automatically generate test cases that cover all the branches in your process.

With SmartVisio4TFS you can easily:

- Visually author TFS work items.
- Create models and link Visio documents and elements with work items.
- Auto-detect and create usage scenarios.
- View and update work item details.
- Save the diagram visual as an attachment or an image to the linked work item.
- Create a hyperlink to a Visio file in the work item.
- Collect meta data from TFS and display its status in a diagram data graphics.
- Bring TFS work items into Visio and display them as a mind map work item visualization.
- Hover over diagram shapes and lines and quickly view the related work item defects.
- Bulk add work items in a diagram.
- Ability to disconnect a diagram from one project and connect it to another.

BENEFITS

- Increase efficiency and project quality.
- Engage all stakeholders, improve collaboration.
- Satisfy compliance and audit requirements.
- Extend the value of your Microsoft TFS investment.
- Reduce time and save money.
- Continue to use the Office tools you know & love.

30-Day Free Trial Offer

SmartOutlook4TFS is a Microsoft Outlook plug-in that enables you to seamlessly Integrate Microsoft Outlook with Visual Studio Team Foundation Server.

SmartOutlook4TFS can easily convert emails and tasks to work items and organize them using Outlook views. Create an easy transition between email communication and work item management, using the right tool for every project role.

With SmartOutlook4TFS you can easily:

- Create work items from within Outlook.
- Create a new work item from an email.
- Author and link new work items in an Outlook grid.
- Attach a list of emails to a work item.
- Insert multiple work items in an email.
- Organize and view TFS queries from Outlook.
- Create new work items from an Outlook task.
- Follow a review and approval workflow in Outlook.
- View test coverage by requirement.
- Manage backlog.

SmartExcel4TFS, a Microsoft Excel plug-in, automates the generation of user defined traceability matrices from Microsoft TFS, including: requirements traceability, defect analysis and work item decomposition matrices.

What used to take days, now can be done in minutes. With SmartExcel4TFS, large volumes of work items and their relationships in TFS can be visualized and organized in a variety of different perspectives, right from within Excel. Creating, analyzing and understanding how information is linked is critical to Application Lifecycle Management.

With SmartExcel4TFS you can easily:

- Create a Requirements Traceability Matrix with complete requirements coverage.
- Retrieve data and display it in a traceable manner from TFS to Excel.
- See work items along with the associated work items that are linked with them.
- Select the properties that should appear in traceability matrix and define the color coding rules.
- Individual work items can be updated by using the familiar interface of TFS and saved to TFS.
- View the test coverage of work items.
- View test cases with their associated defects.
- Generate visual traceability.

BENEFITS

- Increase efficiency and project quality.
- Engage all stakeholders, improve collaboration.
- Satisfy compliance and audit requirements.
- Extend the value of your Microsoft TFS investment.
- Reduce time and save money.
- Continue to use the Office tools you know & love.
