Ad5-CMV-GATA4 wildtype

Catalog number: JMAAd-19
Quantity: 0.5 ml

Gene: GATA4 wildtype

Vector Construction: Wildtype GATA4 mouse cDNA for the transcription factor GATA4 was cloned into the multiple cloning site of pAC-CMV-pLpA. The resulting plasmid was cotransfected into HEK293 cells with plasmid pJM17 which contains the Ad5 genome. Homologous recombination between the two plasmids resulted in the replacement of the Ad5 early region 1 with the mouse cDNA expression cassette, generating a replication deficient recombinant virus.

Epitope tag: None

QC testing: Western Blot

Titer: Approx 1E8/ml

Supplied As: Crude HEK293 cell lysate.

Storage: Store at -80°C. Multiple freeze/thaw cycles not recommended.

Price: \$450
