

REMEMBER
YOUR
FIRST
BIKE?

WE DO.

That first ride without a guiding hand at our backs. Getting used to the feeling of speed; chasing the older kids around the block; jumping off curbs and learning skids.

Now it's our turn to pass on that love of riding. We believe that kids learn the best on the best. That's why we created bixbi.

Route 12 in Celeste.

BUILT LIKE YOURS, ONLY SMALLER.

We appreciate the value of a well designed and well built bike, and we don't believe that kids should have to learn to ride on heavy, cheap, 'disposable' bikes.

Our bikes are made with care, using premium materials and components. We build bixbi's in small batches ensuring that each bixbi is built by one assembly specialist and not a rolling production line.

With slip proof dropouts, quality aircraft grade 6061 aluminium, high quality welds and a cool double triangle geometry we've taken a no compromise approach to safety, quality and design. Just like for the bikes we ride.

THE ROUTE 12.

Your little ripper will love the Route 12's light weight and high quality components. Aluminum frame and componentry make it one of the lightest run bikes available, but it's robust enough to be handed down or shared with lucky friends or cousins.

Size: from 35cm - 48cm (13.8 - 18.9 inches) stand over height

Weight: 3.3 kg (7.4 lbs)

SPEC:

frame: 6061 aluminum with forged drop outs

fork: 6061 aluminum blades & steerer with forged ends

seat post: aluminum 25.4mm x 15cm w/ integrated saddle

saddle: classic look riveted leatherette

stem: 28.6mm x 50mm

handlebar: 25.4mm x 33cm aluminum with no-slip grips

FIVE DELICIOUS FLAVOURS.

Our 2014 lineup is inspired by kids and the things kids love most in life. Rainbows and popsicles. Crayons and finger paint. Flowers and fruit. Mountains and forests.

We've created a bright and energetic colour range to mimic the enthusiasm and energy that kids exude when they ride. After all, you can never have too many flavours of fun.

THE BIKE YOU'D RIDE IF YOU WERE 3 FEET TALL.

Why is light weight so important?

Let's do some simple math. Say the average run bike weighs 11 pounds and the average 3 year old tips the scales at about 35 pounds. As a 180 pound adult, that is the equivalent of trying to wrangle a 57 pound bike - without being able to use pedals.

Bixbi bikes are constructed from 6061 alloy which is commonly used in high quality road and mountain bike frames due to its light weight and durability.
