HighCom Security Announces Three Body Armor Model That Comply with DEA Hard Armor Protocol

CLEARWATER FL — April 28, 2014 —HighCom Security, Inc., a leader in the design, development, and manufacturing of USA made hard body armor and related personal protective solutions, today announced during the International Conference for Police and Law Enforcement Executives conference and trade show in Phoenix, AZ their successful completion of independent special threat ballistic testing in compliance with DEA Hard Armor Protocol for three of their hard armor insert models. This series of tests is unique in the body armor industry and rare among products in the market.

The Guardian Series Hard Armor™ offered by HighCom is considered by many to be some of the best performing and most economical solutions for law enforcement and military operators throughout the world. Specifically, the Guardian 4SAS-7™, Guardian 3SFS-0™, and Guardian 3S9™ are now in a class of their own, and offer law enforcement and military throughout the United States and globally three incredibly effective and affordable options when choosing armor. These inserts, built and tested according to the NIJ ratings for Level IV (4SAS-7), and two that are Level III (3SFS-0, 3S9), offer law enforcement officers the widest range of threat protection and pricing options.

The Guardian 4SAS-7™ is an NIJ 2005 IR compliant hard armor plate while the Guardian 3S9™ is independently tested, according to NIJ 0101.06, and the Guardian 3SFS-0™ is independently tested according to NIJ 2005 IR, that is, an AR500 Steel plate insert. Each of these models successfully defeated a number of special threats at high velocities within close proximity to each shot and to the edge of the plates.

“We build our products to exceed industry standards and we are continuously pushing the envelope of design and performance to ensure the safety of our first responders,” said Michael Gordon, CEO of HighCom Security. Chad Wright, Vice President of Manufacturing, said, “Our design and development team was not surprised by the results and knew, based on our own internal ballistic testing, that these models were far exceeding expectations of the industry average V0 and V50 numbers, and we are thrilled to once again prove it with independently verifiable results”.

Guardian Hard Armor™ models range from IIIA, III, IV, and special threat protection, and are currently offered in dozens of models that range in not only the level of protection, size, weight, thickness, and performance, but also cost. These models are commercially available and sold through HighCom’s global distribution network to Law Enforcement, Federal, Military and Special Ops personnel seeking the most advanced and best performing hard armor protection, and via the Company’s General Services Administration (“GSA”) schedule.

About HighCom Security, Inc.

HighCom Security, Inc. (“HighCom”) is a leading provider of high performance and affordable body armor, personal protective equipment, armor systems, and related accessories. The Company’s ballistic solutions have been deployed to hundreds of thousands of operators in the world, including the U.S. Armed Forces, Allied forces, Federal Government Agencies, in addition to law enforcement and corrections, and other security personnel, both domestically and abroad.
