## INTRODUCING ANKLEAID

The first water submersion device designed specifically for ankle and foot therapy. There is nothing on the market that compares to it.

### FEATURES:

- **THERAPEUTIC.** AnkleAid is designed specifically as a therapeutic device for people with ankle and foot injuries/conditions.
- **TOES OUT.** Toes are less tolerant to extreme temperatures, so AnkleAid keeps the majority of the foot in the water while keeping the toes out.
- **MULTI-FUNCTIONAL.** AnkleAid can be used for both cryo/cold and thermal therapy.
- **COMFORTABLE.** AnkleAid's unique design allows your foot to sit in its natural resting position, delivering maximum comfort during treatment.
- **PORTABLE.** AnkleAid is small and light enough to be used anywhere; in the house, at the gym, at work, in school, or at physical therapy.
- **EASY-TO-USE.** It is as simple as filling AnkleAid with the appropriate amounts of ice water or hot water.
- **AFFORDABLE.** Compared to other therapies that involve compression, AnkleAid is a fraction of the cost.
- **DURABLE.** AnkleAid is crafted using an ultra-durable hard plastic to withstand both hot and cold temperatures, and to prevent cracks and breakage when being stored. With normal use, you should never have to buy another AnkleAid in your lifetime.

### BENEFITS OF THE ANKLEAID ICE BATH:

- Reduces ankle and foot pain
- Reduces ankle and foot swelling
- Reduces ankle and foot spasms
- Reduces ankle and foot tissue breakdown
- Promotes vasoconstriction/cellular survival

### ANKLEAID VS. TRADITIONAL TREATMENTS

#### AnkleAid

- Full foot immersion – AnkleAid keeps toes out, eliminating the need for toe caps

#### Traditional Treatments

- Gel & ice packs – Only "spot treat" and do not stay at optimum temp throughout treatment
- Ice bags – May leak and need constant adjustment

### WHAT PEOPLE ARE SAYING:

*"We have been using the ankle aid for about a month now at our schools and in the clinic. Our Athletic Training staff has been impressed by its' ease of use, quick turnover between athletes, and portability. The smart design allows the ankle to remain in a neutral position and eliminates the need for toe caps. Great product!"*

**Mike Bidwell PTA, ATC, CSCS**

*"Patient response to this product has been nothing but positive. They were very impressed with how warm the toes stayed during treatment and reported if they had to submerge the toes, they would be less likely to adhere to the required treatment time. I highly recommend this product to anyone seeking to add an alternative method for icing and heating the ankle/foot complex."*

**Daniel Henck PT**

**Lead Physical Therapist | Saint Francis Hospital  
Center for Occupational Health and Rehabilitation**

*"Thanks so much for sending us the AnkleAid; what a great invention! We look forward to being able to use it in the future and we always appreciate it when UCONN alum take care of their team."*

**Kevin Ollie, UCONN Men's Head Basketball Coach**

*"As a college track & field athlete I do a lot of damage to my joints, especially my ankles. Icing my ankles is difficult because of poor circulation in my toes. The AnkleAid makes it easy to ice my ankles without freezing my toes. It's also perfect for on the go. I just pack it and take it with me to all of my competitions. It helps me recover much quicker when I ice down right after a competition."*

**Chris**

*"My 12 year old son Drew broke his ankle. He thought the AnkleAid was pretty cool and liked that his whole foot did not freeze. I liked it because his entire ankle was getting soaked, not just one side like when he used the ice pack. It worked miracles...went back to the doctor and he came out of the boot two weeks earlier than expected! Thanks AnkleAid...we loved it!!*

**Tracy**

*"I recently had surgery on my lower calf. AnkleAid served a two-fold purpose for me. Icing my leg helped keep the swelling down from the surgery, and using hot water in the device helped me to keep the incision clean and soft. I was having a lot of trouble getting the wound to heal, and adding AnkleAid to my strategy helped it to heal very quickly and I am now fully recovered. Thanks for the invention, it was not only helpful, but made wound care easy!"*

**Julia**
