

Thank you for buying Scarecrow Custom Fangs, the ORIGINAL Deluxe Fangs!
THIS KIT CONTAINS GENUINE DENTAL MATERIALS, SAFE FOR USE IN THE MOUTH & ON YOUR TEETH, BUT PLEASE USE COMMON SENSE, DO NOT SWALLOW ANY PART OF KIT.
 Customize your fangs once for years of snap-fit use. NO boiling water, NO adhesives, NO partial plate. Totally realistic, tight-fitting & easy to use! Read instructions before you start because there are great tips for getting the best fit. Look for Scarecrow fang fitting videos on internet sites.

1. POSITION: Depending on the size & shape of your teeth, fangs will fit on upper or lower canines or incisors. In a mirror, find the best position for the first fang. Check the angle front-to-back & side-to-side. Practice getting fang into the best position with ease so that you can locate it quickly with minimal adjustment. For the best fit, you'll want to be able to slip it up on your tooth accurately rather than putting it up and then adjusting it into place once it has the mixture inside. Customize each fang separately. Enough material is provided to customize each fang twice, so you can re-adjust one if necessary.

2. MIX: Twist ONE capsule of powder apart and empty into the carry case if your kit includes one, or use a shot glass or metal spoon or vessel - *do not use a paper or plastic cup!* Tilt the carry case so that all the powder collects at the bottom edge of the case. Snap off bottle tip & squeeze 5 drops (For "shredders" use 10 drops) onto the powder. Stir with the stick provided for 30 seconds until the mixture is uniformly wet and turns pasty. Keep the powder/liquid mixture in a glob at the edge of the tilted carry case so you don't waste any (**Illustr. A**):

3. FIT: Scrape ALL of the mixture onto the inside WALLS of one fang - NOT into the deep part of the cavity, applying it to the front & back (**Illustr. B**). Gently push the fang all the way up onto your tooth, locating the best position in one motion. For Blood-tip Fangs, DO NOT get mixture on red tips. The mixture should squeeze out around the edges of the cap into the cracks between your teeth, this is normal. The more excess you leave on between teeth, the better the fit. Push the fang lightly against the front of your tooth so it has good contact with your gumline & looks natural. DO NOT wiggle, reposition or adjust the fang after you push it up onto your tooth & DO NOT attempt to remove excess material.

4. WAIT 5 MINUTES! Flare your lips and tilt your head back (so you don't drool) & watch a clock for 5 minutes as the mixture hardens. Don't start the other fang until 5 minutes have passed so that you don't accidentally loosen the first before it sets up. *Do not remove the first fang* & practice positioning the second fang in the mirror. Orient it relative to the first so that it has a similar angle and looks good. Keep in mind that mouths & teeth are asymmetrical and fangs may not fit your right and left teeth exactly the same, this is natural. You are trying for the best fit for each tooth. *Leaving the first fang in place*, customize the second fang & wait 5 more mins.

5. FINISHING: Do not remove fangs for about 15 minutes after you complete the customizing process on both fangs to allow the liner on the second fang to harden completely. Because the liner continues to harden for up to 24 hours, be sure to remove them after 15 mins, don't just leave them on for the night. Gently push your lower teeth forward against the backside of the fang tips until you hear a slight click (**Illustr. C**). Then grab up around the top of the fang and edge of the liner so you don't pull the cap off the liner. Wiggle and pull gently with your fingers until they loosen up. Your fangs will now clip on and off easily, yet fit snug. After the liner has completely hardened and you have removed your fangs you can trim carefully with a nail clipper if you have to. The excess on the back helps the mold adhere to the fang cap itself, so do not trim that off. Only trim the excess that shows on the front of the fang not between teeth nor on the back where it doesn't show.

FITTING TIP: These fangs fit "most" people perfectly with one fitting and they have a long track-record of safe & long-lasting wear. But, sometimes teeth are particularly small, smooth or pointed, or unusually shaped. If your fangs are well-positioned but you want them to fit tighter, use a single capsule to customize again over the existing liner in both fangs once the first liner has hardened.

Please read these precautions thoroughly before purchasing because PRODUCTS THAT GO IN THE MOUTH ARE NOT RETURNABLE FOR ANY REASON...

- Fangs are NOT a toy and are not intended for use by children, choking hazard, do not swallow!
- Keep unused kit out of the sun and other UV light sources and extreme cold and heat.
- Do not use over braces, wires, plates, crowns, bonding, veneers, dentures or ANY other dental work nor if you have irritated or sensitive gums nor right after a dental cleaning until your gums heal.
- Scarecrow Inc. makes no warranties or guarantees about fit, use at your own risk.
- For adult entertainment purposes, never bite anyone with your fangs.
- It may not affect the fangs, but, to prevent swallowing, do not eat, drink or sleep with your fangs on
- Fake blood, or foods or drinks may stain your fangs.
- Do not smoke while customizing fangs nor customize near open flame, unhardened liquid is flammable.
- Blood-tips, rhinestones and color finishes may wear or chip off with use, handle gently.
- Additional Customizing Kits are available from your retailer
