Hello!

Congratulations on your new 12V to USB adaptor from **Yeti Solar**, LLC. This adaptor enables a LightPortal™ to charge cellphones, tablets, cameras – pretty much anything that can charge via USB. All you have to do to get it working is connect it to the **blue-and-white pair of click-connects** on the LightPortal™ and start plugging in USB devices (see illustration below).

If you like, you can secure the USB adaptor to a wall by peeling the paper off the adhesive strip on the back and pressing firmly to the wall.

Thank you for your purchase!

- The Yeti Solar, LLC team

Please Note: Do not attempt to charge USB devices when the battery in the LightPortal™ is almost fully discharged (LightPortal™ looks visibly dim when switched on). The USB device will be unable to charge, and may actually lose charge as a result of attempting to establish a charging circuit over and over again.

If you encounter any difficulties, please consult our website at www.yetisolar.com, e-mail us at sales@yetisolar.com, or call us at 571-423-9473.
