

### A Natural Water-Soluble Fiber

The American Dietary Association recommends 25 to 35 grams of total dietary fiber per day. It is very hard to eat enough fiber foods on a daily basis to keep up without a supplemental fiber.

The Arabinogalactan Larch Tree grows in the Great Northwest. An edible dietary fiber taken from its wood offers therapeutic benefits as a prebiotic.

**Dr. LaMar's FiberAide™** is a fermented fiber which is not digested in the stomach but is passed through to the large intestine or colon where it enhances growth of friendly floras. This promotes long term colon health and could reduce the risk of colon cancer.

In addition to supporting a healthy colon, **Dr. LaMar's FiberAide™** has unique immune-boosting properties.

It tastes great and mixes instantly with any beverage.
