

# **Report for Pilot Clinical Study of tNANO Healing Tools Pendant**

Submitted by the Energy Medicine Research Institute  
Lisa Tully, PhD

December 22, 2013

## **Introduction**

A pilot clinical study was conducted to determine the efficacy of the tNANO I AM ONE WITH CREATOR Healing Tools Pendant (tNANO) to improve physiology as measured by Gas Discharge Visualization (GDV). This technology was chosen to represent physiological health and well-being and is described below.

The tNANO is a high-tech tool that performs as a multi-function energy generator. It can protect one from negative energy and amplify ones energy field. In this study, the ability of the tNANO to improve one's energy field, as measured by GDV was assessed.

Results of this study show that wearing the tNANO pendant has a positive effect on GDV measurements. The biofield and organ system functions were improved and the chakras became more aligned. All of these changes represent an improvement in overall health and well-being.

## **Methods**

### **Technology Utilized for Human Measurements GDV**

The GDV camera ([www.gdvcamera.com](http://www.gdvcamera.com)) is sophisticated Kirlian technology developed in Russia. The GDV system allows for direct, real-time photos and videos of the entire energy field of a human. The information is extracted from biophoton corona discharge patterns produced by high-voltage electrophotography. It is analyzed by specially developed computer software that measures brightness, size, fractality and other parameters of the energy field. It is a unique system, based on, but distinctive from that used in Kirlian photography. It allows the study of the biological energy fields of humans. The "Kirlian Effect" refers to the resulting image of a gas discharge; "fluorescence" or glow that appears around the edge of a subject after it is placed in a high-intensity electrical field. It can be used to estimate the energy state of a person, which can be an indicator of health. This technology is a non-invasive method that allows an investigator to measure and analyze individuals in a scientifically objective and reproducible manner. Furthermore, the biofield measured by the GDV can be correlated

to specific organ system functions. The GDV is registered by the Ministry of Healthcare of Russia as a medical device.

The biofield of a healthy active person is dense, uniform and has smooth changes of color from the blue spectrum through the orange to the yellow. Holes, gaps, heterogeneities and outbursts in the aura are indicators of disturbances in the energy field. They point to disorders on mental, functional or organ levels, showing a direct link to the organ system indicated on the biofield picture.

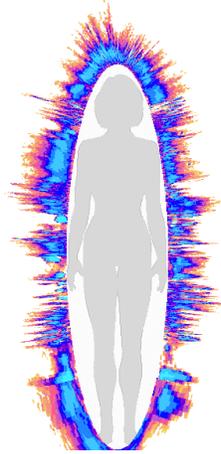

In addition to assessing general health, the GDV can measure chakra balance. There are major energy centers throughout the body, which are connected to organs or glands that govern the body. Each of these main energy centers is referred to as chakras. Chakra means wheel in Sanskrit and is a concept that originated in traditional Indian medicine. It refers to wheel-like vortices that are said to be "force centers" of the body and the focal points for the reception and transmission of energies. Seven major chakras are located within the subtle body and each center is connected to our being on several different levels: physical, emotional, mental and spiritual.

## **Results**

### **GDV Testing**

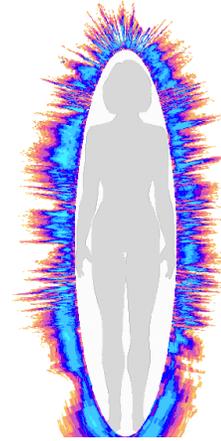

The GDV assesses the subtle energy available for metabolic processes in the body. The larger the area of color around the body and the more filled in it is, the better the overall state of health. A higher level of symmetry also reflects a better state of health.

Figure 1 shows the area of the biofield produced by the GDV camera before and after a wearing the tNANO for 10 minutes. The overall area of the biofield at baseline (left image) is 18.852 and 10 minutes after (right image) is 20.559. The areas on the images that are not filled in represent deficiencies of certain organ systems and seen in Figure 1, these areas are beginning to fill in after wearing the tNANO. The symmetry, or energetic balance of both halves of the body for baseline and 10 minutes after treatment, is 89% and 94%, respectively. Improvements in both the area and symmetry of the biofield indicate an improvement in the physiological systems of the body.

**Baseline**

**Area**        **18,852**  
**Symmetry**   **89%**

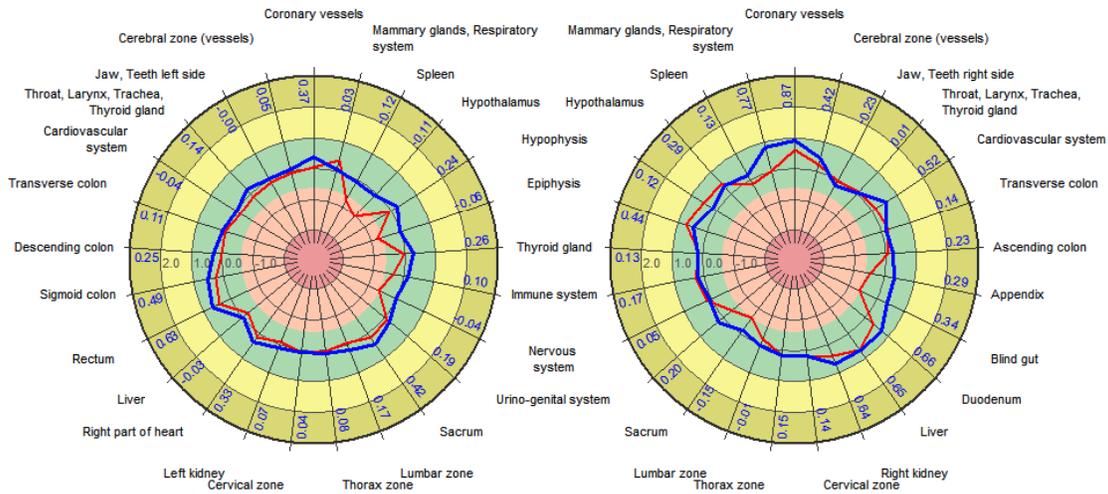

**10 minutes after wearing tNANO**

**Area**        **20.559**  
**Symmetry**   **94%**

**Figure 1. Kirlian photography before wearing the tNANO.**

Figure 2 shows results of organ system function, as measured by the GDV technique for the same subject before and after wearing the tNANO for 10 minutes. The red circles represent energetic levels of the organs listed in the diagram before treatment and the blue circles show energetic levels 10 minutes after wearing the tNANO pendant. The pink area on the figures indicates low energy levels (deficiency), the green area indicates normal energy and the yellow area represents excessive energy levels (inflammation). In this type of diagram, a perfect circle represents perfect health.

As shown, all of the organ systems that were out of the normal range were normalized. The diagram (blue) after wearing the tNANO looks more circular, without the sharp dips that indicate organ deficiencies that were observed for the baseline measure (red circle).

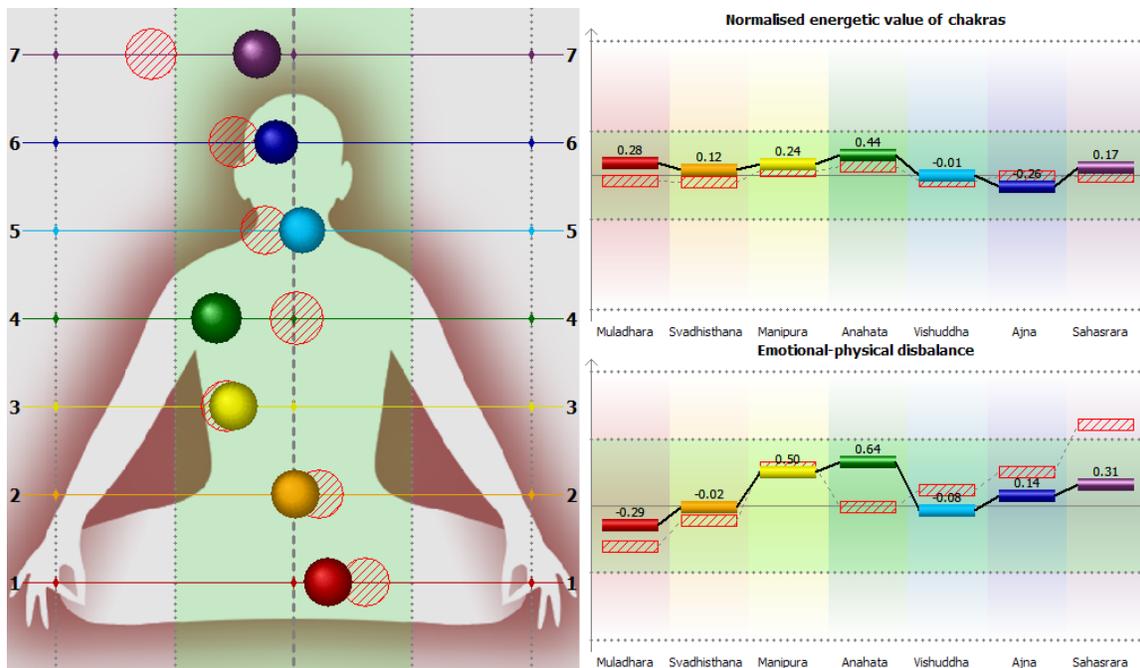

**Figure 2. Organ System Function Before and After Wearing the tNANO.**

Figure 3 shows results for the test of chakra balance of the same participant before and 10 minutes after wearing the tNANO. Each sphere from the bottom to the top represents a chakra, ranging from the first to the seventh chakra. The closer the sphere is to midline, the more balanced the chakra is. The green area shows the “normal” range for the balance of each chakra. The graphs on the right show the values for both the amount of energy the chakra contains (upper figure) and the balance of the chakra (lower graph).

In the figure, the circles with slashed lines represent chakra balance before treatment and the solid circles represent the chakra balance after treatment. The closer the circles are to midline, the more balanced the chakras are,

As shown, all of the chakras that were furthest from midline, or perfect balance are moved closer to being in balance by the tNANO. The fourth chakra was moved away from midline, but remained in the normal range (green area). The seventh chakra was the furthest out of balance and was returned to close to midline, or perfect balance (purple circle). These results indicate that the tNANO pendant greatly improves one's energetic field related to physical and emotional well-being.

**Figure 3. Chakra Balance Before and After Wearing the tNANO.**

## Discussion

The results of this pilot study show that tnano pendant produces improvements GDV measures. The GDV testing shows significant improvements in the human biofield, organ system function and balancing of the chakras after wearing the tNANO for 10 minutes.

Improvements were observed in the area and symmetry of the biofield. The biofield area increased 35.7% and the increase in symmetry was 10.2%. The results for organ system function correlated with the biofield results. Wearing the tNANO dramatically reversed the most negative organ system deficiencies and brought the values for the organ systems that had deficiencies back into the normal range.

Results for the chakra balance were also impressive. Wearing the tNANO brought the chakras that were furthest out of balance more in to balance and the second and fifth charkas were perfectly balanced. These results suggest that the tNANO may provide more than physiological benefits.

It should be noted that the increases in the biofield, improvements in organ system function and chakra balance were observed at 10 minutes. To see effects in such a short time is impressive. It is likely that further effects will be observed over a longer time period. Furthermore, the tNANO may provide additional benefits that were not tested in this study, such a brain effects and other physiological systems. Additionally, the tNANO may benefit animals and plants as well.

In conclusion, these results are dramatic and very promising and a larger study repeating these observations and looking at time course of action is recommended. In addition, other tests can identify further benefits of the tNANO.
