

Subject: Water Inlet Valve Supplier Change

We are changing the water inlet valve supplier, which will reduce the number of valves required to service multiple models. This latest version of water inlet valve is backward compatible across three generations of ice machines. To identify the water inlet valve for a particular model refer to the Electronic Document Catalog. Use up your existing stock first before ordering the replacement part.

Previous Supplier Part Number	Current Supplier Part Number	Voltage/Hz/Ph
000000375	000009120	115/60/1
000007966 NOTE: This valve is now replaced by two valves.	000009121 i1400, S1400, i1600, S1600, i1800, S1800 only	230/50-60/1
	000009122	230/50-60/1
000007965	000009123	115/60/1
000003395	000009125	115/60/1
000000376	000009126	230/50-60/1

The Electronic Document Catalog (EDC) contains the most up to date information for replacement part numbers. The EDC can be accessed directly at this link - <https://manitowocfsg.sysonline.com/Default.aspx> or from the MII website download section.

The EDC can be accessed from a computer or mobile device such as a tablet or smart phone. The program is available to everyone; registration, a user name or a password are not required to access the program. The EDC is capable of powerful searches. Searching by part number will show all models the part number is used on. An instructional training video covering navigation and usage accompanies the EDC, and is also available in the training section of the MII website. The EDC also contains the most current manuals, instructions and bulletins. Always use the EDC to verify you are using the correct replacement part for each particular model.
