

# Application Instructions

Things you'll need:

# VINYL INFUSION

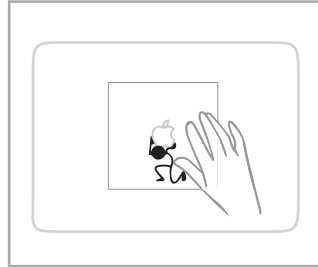

[www.vinylinfusion.co.uk](http://www.vinylinfusion.co.uk) | [sales@vinylinfusion.co.uk](mailto:sales@vinylinfusion.co.uk)

## Step 1: Prepare the Surface

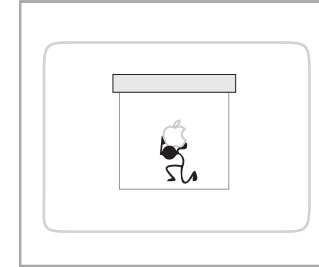

In order to get the best adhesion between the decal and your device, you need to have a clean, dry surface. Grab a damp cloth (no soap) and wipe down your device to remove any dirt or grease. Then grab a dry cloth and wipe again to remove any moisture.

## Step 2: Alignment

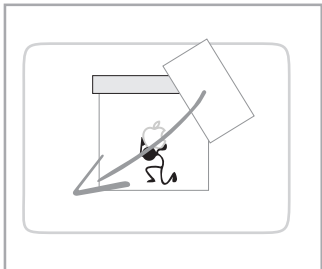

Before you apply your decal you should align it on your device into the position you want to apply it. Take special care with decals designed around the logo.

## Step 3: Apply some tape

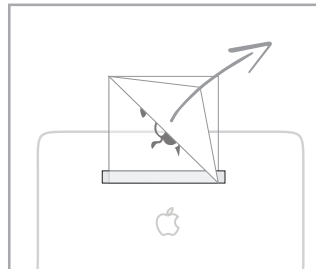

Apply some tape to the top of the decal, securing it to your device.

## Step 4: Press

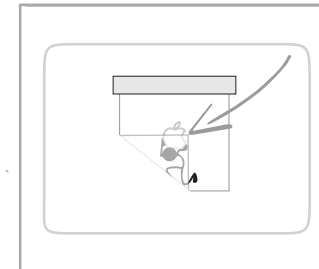

Using your fingers, or a hard plastic object like a credit card, apply pressure to the decal, ensuring you cover all of the surface area. This helps bind the decal to the application tape.

## Step 5: Remove White Backing Paper

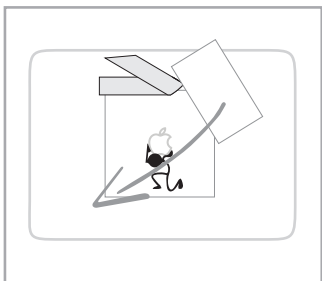

Lift the decal, using the tape you applied as a hinge, and remove the white backing paper from the decal. Take care not to allow the decal and sticky application tape to touch the surface of your device.

## Step 6: Applying the Decal

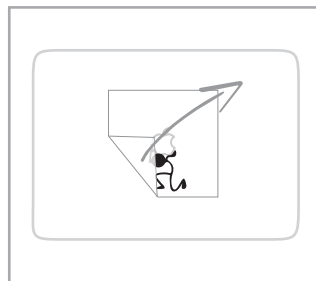

Starting in one of the top corners, start pressing your decal onto the surface. Work from the starting corner, across the top, and then down the decal until it is all stuck in place. and no air bubbles are present.

## Step 7: Remove Tape & Press

Remove the tape you applied to the top of the decal. Then, using your finger, or a hard plastic object like a credit card, apply pressure to your decal, ensuring you cover all of the surface area. Take special care around the edges of the decal, and ensure firm pressure is applied and no air bubbles are visible.

## Step 8: Remove Clear Application Tape

Now the decal is attached to your device, carefully peel off the clear application tape. Start in one corner and peel back the tape slowly over itself, as close to 180 Degrees as possible. If any small part of the decal sticks to the application tape, push back down and apply pressure before peeling back the tape again.

## Step 9: The Unveiling!

Now the application tape is removed, give the decal one last go over with your finger.

Now....it's done! Congratulations, we hope you enjoy your newly customised device.

We hope you enjoy your unique piece of vinyl art. Here at Vinyl Infusion we love seeing our decals in their new homes, so it would be great to see some photos that show off your efforts.
