

Birds were roosting and nesting in some of the secluded pipe areas.

Some of the typical mess can be seen in the photo above. Had to be cleaned very regularly.

They chose to use the Fog Force bird repellent and installed the Cobratech modular diffuser system.

Pipe Bridge with the Cobratech 200 controller mounted on the wall. An Atomizer is also mounted (closest to camera). There is very little bird activity in these areas now and consequently very little cleaning required. The diffusers are set to activate during summer hours from 5:30am - 7:30am, 10:00am - 10:30am, 1:00p - 1:30pm, 5:30pm - 9:00pm. They are on for 6 seconds, off for 8 minutes. They vary the half hour periods during the day to keep the birds guessing.

Cobratech 300 Atomizer installed.
