

## Pestgard BroadBand PRO successfully keeps seagulls away.

**July 2013** - Mr Ken Foster from Dargaville contacted Pestgard for a solution to keep seagulls off the roof of his warehouse. Hundreds of seagulls were perching on a roof area of approximately 60 metres by 40 metres. Mr Foster purchased a BroadBand PRO unit, recommended by Pestgard, with 8 speakers and a specially customised sound chip to target seagulls.

He had considered setting up a wire grid on the roof. He felt this was expensive and impractical especially when the roof would need painting at some stage.

The roof was water blasted and cleaned of all the bird mess left by the seagulls, this took over 2 days to complete. The BroadBand PRO was then setup and installed.

**August 2013** - Mr Foster contacted Pestgard to say that the BroadBand PRO had been installed for a week and was happy as he no longer had any birds on the roof.

**April 2014** - Mr Foster contacted Pestgard again, he was very happy with the results from the BroadBand PRO. It had kept the seagulls off his roof for over 8 months and also off the roof of the shop next door.

Pictures below of the clean roof with the BroadBand Pro installed.
