

Bird spikes are an effective means of keeping birds away from particular roost and perch areas. We have a range of different bird spikes available for many different applications and birds species. The most suitable spikes to use depend on the width of the area that needs to be covered, the target bird species and the bird pressure in the area. It is not recommended to use spikes, where birds are nesting. Ask us for advice or more information, if required.

Stainless Steel Spikes with Poly Base

Quality 304 grade stainless steel spikes

Pre-drilled screw holes every 50mm

Easy break points every 50mm

Easy join length connectors

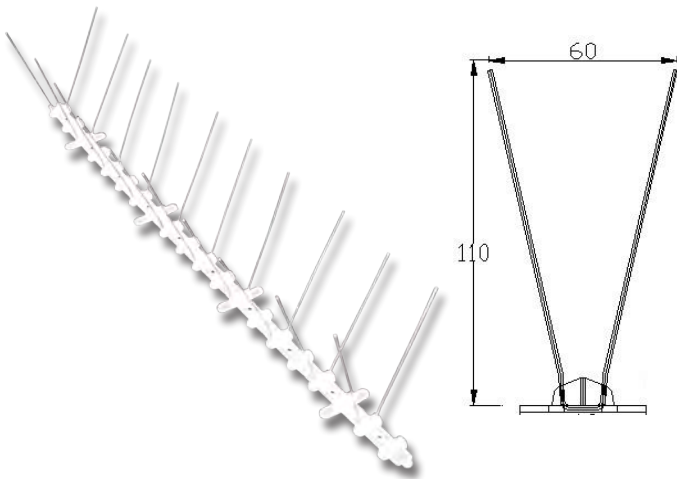

1.3mm spike diameter

Flexible clear poly base

Glue channel underneath base

12mm base width
