

Pyrotechnics Kit Testimonial.

Smith Seeds Ltd

We heard about the Pyrotechnics kit with the single shot launcher from Pestgard that fired bangers and screamers. We thought we would purchase one to trial. Upon delivery we set out to visit a few Radish crops that birds gave a hard time. We were instantly impressed by the volume of the bangers firstly and then we tried a screamer. This was even more impressive by its volume and distance. The sound and scream would travel right across the paddock. The birds moved pretty quickly out of the paddock. We waited to see if they would settle back into the paddock after 5 minutes or so, but they didn't.

Our field Reps would use these with every visit to Radish crops by firing about 4-5 banger shots and the same with the screamers, any paddock that was under more pressure we would go back to the paddock after a few days. They were particularly effective with other bird control methods such as kites etc.

Bird control in Radish has been typically kites, bird banger machines, chemical sprays and netting, each of these have their own strengths and weaknesses but the pyrotechnics kit is something quite unique and I would highly recommend these as they are easy to use and each of our Field Reps can carry the case safely to each field of radish and other crops for use.

I would definitely recommend the Pyrotechnics kit for any farmer or Merchant that is looking for an easy to use device for bird control.
