

Retracta-Belt® Vs. The "Competition"

Retracta-Belt®

Made In USA Since 1992

53% Longer Belt

Our **10'** belt means you **need to buy less posts** today and have to store less posts tomorrow.

Safest High Tech Brake

Our patent pending rotary damper technology is a step ahead of any competition. Our brake is the **most controlled, consistent, and reliable brake that works at any distance.**

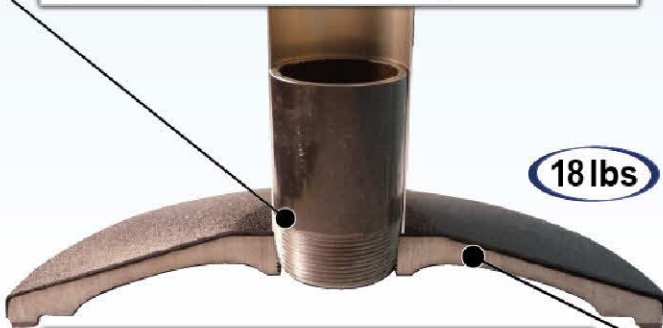

50% Thicker Tube Wall

Our **.062" thick tube** is always made of quality steel, rust proof aluminum or **rust proof grade 304 stainless steel.**

Superior Base Connection That Always Remains Straight

Our Large Diameter Threaded Steel Base Connection:

- Keeps the post straight even when loose
- Never requires tools to re-tighten

Our **Cast Iron Base Material** will withstand a lifetime of abuse from moving or dropping the post.

"Competition"

Made Where?

Weak Plastic Material

Their **plastic can easily crack** from customer abuse.

Little To No Brake

They either **don't have brakes** or utilize low-grade centrifugal motion pads that can **wear over time and only function when the belt is fully extended.**

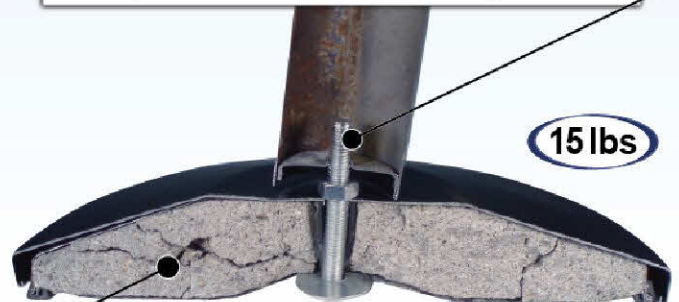

Thin Material That Rusts

Their **.040" thin tube** is made of low grade steel or 201 "stainless steel" that can **easily dent and rust.**

Weak Base Connection That Leans Over Time

Their Hardware Connection:

- Can become loose and cause the post to lean
- Requires tools if it can be re-tightened

Their **Cement Filled Base Material** can easily crack and break apart from moving the post over time.
