Customer Testimonial:

Drag racing a S1 Buell with standard wheel base with no wheelie bars or swing arm extension has caused some problems. The additional horse power and with the standard clutch could result in instantaneous violent wheel standing on the start line. I needed a clutch that I could either adjust to slip from the start line or slip easily myself. Since fitting the AIM Corp VP clutch it has given me a very light (I'd say at least 50% lighter) controllable lever action that is predictable every time. I was very please with the quality of the VP clutch, fitting was straight forward and extremely cost effective compared to other clutches combinations on the market. Being half a world away in Australia, AIM Corp's technical service and racer discount program was outstanding.

Yours Sincerely

Wayne Wilesmith

1/4 mile Best Time: 11.290sec@120mph

Model: Buell S1, 1996

Builder: LA Cycles, Sydney Australia

Displacement: 74ci (1200cc)
