AEI ADJUSTS TO ELIMINATE SHADOWS AT GMP METALS

When GMP Metals installed their new laser cutting CNC, they selected AEI's T5 ADJ 654 to illuminate the area. Existing plant lighting was HPS and fluorescent task lights. For this state of the art machine they were looking for state of the art lighting. After evaluating Metal Halide and other AEI T8 and T5 low bay solutions, the AEI Adjustable Series was selected because it provided the most uniform and shadow free illumination. Each T5 ADJ 654 fixture consumes 350 Watts and allows the user to aim the light where they need it most. Let AEI fulfill your lighting needs with an energy saving and space enhancing solution today.

There is no comparison between AEI's adjustable fixture and HPS's.

Notice the clear difference between AEI's fixtures and the pre-existing High Pressure Sodiums in the background.
