

# AEI ILLUMINATES HERSHEY WITH 1/2 OF THE ORIGINAL FIXTURES

2000

4000

Hershey installed an aisle at a new distribution center to prove that AEI's fluorescent highbays could replace their existing 400W HPS. The engineers disputed that a 50,000 lumen 400W HPS fixture could be replaced by 350 watts of fluorescent. Not only did the AEI T5L 654 out perform the HPS; they were able to evenly illuminate the aisles with 1/2 of the original fixtures! (See picture with every other fixture off) With 85 CRI white light VS 22 CRI Yellow light, workers can identify the product and codes easier so efficiency improves and pick errors decrease. In a conditioned space like perishable storage, reducing your lighting load has a three fold benefit. For every watt you reduce in your lighting approximately 3 watts are saved on your chiller system. AEI offers a broad range of fixtures for conditioned and frozen storage. Contact us today to learn more about our solutions.

DARK AGES.

## **AEI Lighting Summary for HERSHEY**

### **Application:**

Distribution Center, High Bay for Aisles

### **AEI Fluorescent Fixture Used In Solution:**

AEI Lighting's T5L-654 Linear High Bay

### **Savings Summary:**

AEI's T5 Fluorescent T5L-654 industrial lighting fixtures replaced Hershey's HPS at a 2:1 rate and averaged 30% wattage savings over each original HPS fixture.

### **About AEI:**

AEI Lighting provides T5 fluorescent industrial lighting fixtures for all applications, including distribution centers, manufacturing facilities, warehouses, cold storage, commercial exteriors, site/area parking and extreme environments.

AEI also provides Induction and LED Lighting fixtures for roadway, site, area, parking, garage, high bay, gas station and commercial exterior applications.
