

RR Import Utility

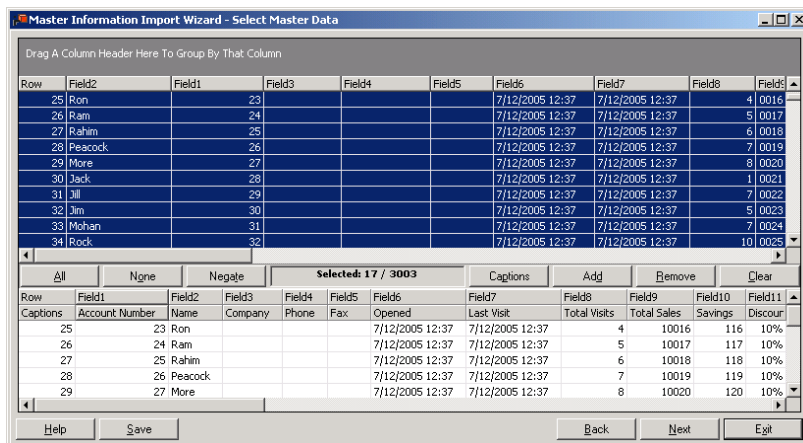

Product Overview

Why RR Import?

The RR Import Utility enables you to import external data into your desired database. Currently, the Import Utility imports data to RMS Store, RMS HQ, MS POS, POS2009, and OpSuite. This imported data can be the catalogue of data, purchase orders and transfers, or complete sales transactional history. To receive immediate price, item, and supplier updates, you can use the utility's Catalogue Import feature, which highlights what is new data, what is old data that has been changed, and what is old data that has not been changed. This lets you select what you want to import and update---saving time and reducing errors.

Flexible, Fast, and Complete

One of the BEST features of RR Import is that it lets you import data to ANY version of RMS or POS2009, as well as move data from RMS to POS2009, or in reverse from POS2009 to RMS. RR Import also works with OpSuite, letting you move all data and history from HQ to OpSuite. The Catalogue import feature is also supported for OpSuite.

Easily select data to import!

Benefits for Resellers and Customers

Resellers save time using RR Import! When they convert customers from an old database / system to RMS or POS2009, they can quickly import historical data without having to manually key it all in! It's so versatile that you can use it for basically any database!

Customers greatly benefit from RR Import too! The Catalogue feature lets a person specify exactly which items to import. For example, there might be some items he doesn't want to import. Or, he might want to import only changes to the import list. RR Import lets him do this as well as create records for all the items that don't yet exist in his database.

Major Import Features

Ideal for almost any business (e.g., Pharmacies, Book Stores), RR Import easily imports:

- Data from created files (e.g., Excel); or establish an ODBC connection to a preferred database
- Master data to the store, headquarters, or the MSPOS database
- Large amounts of data effectively and securely
- Historical sales, work orders, layaways, quotes and back orders
- Existing purchase orders, transfer-ins, and transfer-outs
- Different item types, like Standard, Matrix, and Serial
- Catalogs, purchase orders, as well as transfer In and transfer out orders
