## ProAiir™ Hybrid Makeup

by ShowOffs Body Art

**Hybrid:** noun \ˈhī-brəd\ the offspring of two or more varieties produced through human manipulation to achieve specific characteristics.

**ProAiir:** noun \ˈprō er\ the combination of airbrush tattoo ink and airbrush makeup to achieve the specific characteristics of durability and water resistance while maintaining the ability of easy removal.

**ProAiir™ Hybrid Makeup** - Unlike other hybrid makeup, **ProAiir™** contains no water and blends together a complete set of water repellant makeup ingredients. With **ProAiir™**, ShowOffs sets the standard for hybrid makeup today and tomorrow with the most durable, longest lasting, non-staining, most water repellant makeup formula on the market. The absence of water in our formula means you'll experience little or no separation of pigments from fluids and longer shelf life, leaving you time to service customers instead of wasting time stirring or shaking bottles. By following simple application instructions, **ProAiir™** will outperform and outlast all hybrid products for application and durability. Not only will your designs look better and last longer, you'll have happy customers from the time the design is complete until they're ready to remove it. Ease of application, durability and simple removal. What more could an artist ask for in a hybrid makeup?

*ProAiir is the airbrush version of Cosmetic Liquid Eye Makeup.*

What makes ProAiir™ Hybrid different from all the others?

**WATCH OUR "WATERPROOF" VIDEO at <http://youtu.be/Vjv4ke3hEFE>**

- Goes on smooth and provides unbeatable durability. Applied correctly, designs can last up to 3 days.
- Shelf life: open bottles 3-5 years, unopened bottles 10 years
- Vast selection of vibrant colors including Fluorescents
- Fantastic coverage for all fantasy makeup artist's needs
- Dries instantly allowing rapid layering without worry of stencils lifting colors
- Completely water repellant enabling application in hot or rainy conditions without smearing or running
- Smudge proof formula sets instantly and won't rub off or damage clothing
- Formulated for ultimate flow ability without separation of pigments
- Almost no mist or fog created when using in closed areas (no more nose hairs filled with paint)
- Fluorescent colors do not need a white base in order to POP. They're great under black light too.
- Readymade formula never requires diluting. Screw adaptor caps on bottles and go!
- Perfect for application on prosthetics: sprays directly on foam masks and other materials.
- Hypoallergenic formula safe for use on sensitive skin. (Cosmetic alcohol content identical to that in liquid eye liners)
- More sanitary than water based products, as mold can't form in the absence of water.
- Aromatic fragrance is pleasant to the senses.
  - Do not apply if your customer has allergies to fragrances.
- Easy identification / differentiation of **ProAiir** Hybrid vs. Ink. (Different color labels and bottle tops)
- FDA compliant and made in USA!
- AFFORDABLE and comes in larger quantity size bottles too!

Directions for use:

- Set air pressure between 10-15 PSI (may vary by compressor - keep it comfortable).
- Shake makeup bottle VERY WELL! Then secure to airbrush with adaptor caps.
- Use with adequate ventilation, keeping away from flames.
- Best when applied to clean, oil-free skin. Wipe skin with wet wipes to remove foundation makeup before applying ProAiir.

**Shake Bottle VERY WELL  
Quality Pigment used!**

- Lightly hold stencil against skin, if applicable.
- Ask customer to close eyes when spraying and hold breath when spraying around nose.
- Spray between 2-4 inches from skin for best color and control. **LESS IS BEST!**
- Apply in light coats, layering for deeper effect. Layer multiple colors for interesting looks.
- Wipe off overspray with rubbing alcohol on Q-tip.
- Avoid makeup clumps caused by moisture getting into makeup bottles on high humidity days - place **INLINE DESICCANT** filter after water trap to filter all water. ProAiir hates water!

#### Removal from skin:

- Remember that **ProAiir™** is water repellent! Water alone will NOT do the trick.
- Wipe off with oil (e.g. baby oil), makeup remover or lather with liquid soap first, then rinse with water or towel.
- Body paint - lather liquid soap first to breakdown the makeup (no water at first). Then rinse in shower.

#### Removal from fabric (e.g. clothing):

- Do NOT use water. Apply alcohol or alcohol-based hair spray and dab to remove.

#### Airbrush cleaning:

- Rubbing alcohol 91% + proof is fine but for extensive cleaning - Denatured Alcohol is recommended. Seek out the biodegradable green formula found at Home Depot or Lowes paint dept. (Denatured is also used to clean windows).
- Spray Denatured alcohol or Rubbing Alcohol through airbrush (front spray and back flush).
- For storage, withdraw airbrush needle slightly, tighten in place then place airbrush tip down into storage jar containing roughly one inch of Rubbing Alcohol. (just enough to submerge the airbrush siphon)
- Quick airbrush flushing may be required in extreme heat to prevent needles from drying.

#### Stencil cleaning:

- When stencils require cleaning to restore appearance, store in zip-locking bag or shallow bowl containing 91% + alcohol for 30-60 minutes. Rinse and dry upon removing.
- With ProAiir, you'll find very little buildup on stencils. Some people don't even clean them!

#### Airbrush cleaning:

- Oil your airbrushes after 20 uses or as needed. **DO NOT** over oil your airbrushes, as this will cause spattering of ink.
- **ONLY** use airbrush oil, not household oil! If you make a mistake, here's what you need to do...
  - Set compressor to high pressure (*45+ to blast them clean*). Using a mister bottle, spray airbrush cleaner or Denatured Alcohol into siphon while spraying. Remove needle and spray into needle area of airbrush as well, wiping needle occasionally. Repeat multiple times as needed. Remember to return pressure to 15 PSI when complete.

#### Special notes:

- Do not apply **ProAiir™** if your customer has allergies to fragrances
- **ProAiir™** Hybrid colors **CAN** be mixed with other **ProAiir™** Hybrid colors to create new blended colors.
- Do NOT mix **ProAiir™** with water or any other products.
- Fluorescent colors separate a little and require shaking or stirring.
- Should separation occur, shake, stir or quickly back flush the airbrush (cover the adaptor cap air hole and back flush spray briefly to mix pigments). *Look up videos on airbrush back flush - don't try if not familiar with it.*
- Metallic colors generally have shorter staying power than other formulas.
- When using white, apply first to skin as opposed to over other colors as it does not cover completely over red.
- On sensitive skin, apply white before using Hot Pink to avoid a slightly longer-lasting stain.
- Do not apply to open wounds, sunburned skin or soars as doing so may cause discomfort.
- Adding a marble or stainless steel nut to the bottle will help with mixing liquids.
- Glass bottles are **NOT** recommended. Use plastic instead. Glass may break and it attracts heat, causing evaporation of product or thickening.
