

### What is a NON-Electric Dog Fence?

It is an above-ground, yet near invisible physical fence with dig, chew and climb protection, proven to keep Dogs safe & secure without training or corrections

Pet Playgroundz has developed and perfected a **NON-Electric Dog Fence** that addresses all problems dog owners have with other kinds of fencing, including *chewing, climbing over, digging underneath or just running through!*

Our proven “**Hybrid Fence System**” which uses a combination of materials that work together in a way that makes our fence extremely difficult for dogs to get over, under, or through. For this reason it is also difficult for other animals to get *into* the fenced-in area.

NON-ELECTRIC DOG  
FENCE IS AN INVESTMENT IN  
YOUR DOG’S SAFETY,  
HEALTH, AND HAPPINESS

### About Pet Playgroundz

---

*“Seeing my dog run free with other dogs in our safe Pet Playground brings me the utmost joy” – Traci D, Pit Bull owner*

---

### Need Gates?

Double-latched dog gates come many sizes, including driveway gates. A standard gate has a 5' wide opening, big enough for most mowers.

### How does it work?

Our proven “Hybrid Fence System” comes in an easy, do it yourself kit - complete with everything needed and detailed instructions, you really can do it yourself!

#### Chew Protection

First two very strong overlapping materials, Polypropylene mesh with a 1000 lb. break strength and Metal hex wire- together create small openings that are very hard for dogs to

get their teeth into, also the flexibility & movement of the fence adds to the chew protection, it feels like a net.

#### Dig Protection

The bottom of the fence is flared in 6 to 8 inches flat on the ground and then staked to the ground with highly-effective, kinked metal stakes. This makes it incredibly difficult to dig under.

#### Climb Protection

Two-tension cables replace typical top and bottom rails; this coupled with the fence’s flexibility makes it extremely unstable and difficult to climb, like a net.

*If you're having trouble seeing the fence that's a testament to how well it blends with its surroundings!*

### What other advantages does NON-Electric Dog Fence offer?

- Affordable and very effective at keeping dogs safe, secure, and happy
- Anyone can install a do it yourself dog fence kit, just about anywhere
- There is no training required and other dogs can visit to play!
- Minimal or NO landscaping needed ; it can be effectively installed on hills, over rocks, and uneven ground
- Trees, any structure or your house can be used as posts and or one side
- It blends in to natural surroundings very well, making it nearly invisible
- Protection from other animals and the tick population is reduced
