

# Pain Care

Supplements for your dog's normal daily aches and pains

**Elimay Pain Care** is blend of herbs that acts by its anti-inflammatory and analgesic effects.

## How It Works

Dogs commonly suffer from various arthritic conditions, including joint pain, back pain, chronic limping, and a variety of other muscle and tendon problems. Elimay Pain Care may be used as a joint support formula for such conditions.

## **Elimay Pain Care works in the following ways:**

- Helps dogs with inflammatory diseases including allergies, arthritis, and cancers
- Acts as a joint support formula for various conditions
- Acts as an analgesic in various conditions including back pain, joint pain, muscle pain, etc.

## Ingredients

### **Turmeric (*Curcuma longa*)**

- Turmeric is an all purpose herb. It has anti-inflammatory properties and may be helpful in arthritis, heart diseases, diabetes and cancer.
- There have been myriads of studies done on turmeric, and it's found to be a good pain reliever to dogs
- It helps in joint and muscle pain in dogs
- It relieves pain in arthritis as well as other bone and joint conditions
- It relieves limping and dog stiffness
- It has antioxidative and cytotoxic activity
- It stimulates the immune system.

### **Boswellia (*Boswellia serrata*)**

- Anti-inflammatory activity
  - It effectively shrinks inflamed tissue by improving blood supply to the area and enhancing the repair of local blood vessels.
  - Some studies show an increase in synovial fluid viscosity.
- Analgesic:
  - It may help relieve the chronic muscle and bone pain in dogs.
  - It may be used to treat joint pain and spinal disease in dogs.
- Other benefit:
  - It may also have anti-carcinogenic, anti-tumor, and blood lipid lowering activities.

### **D,L- Phenylalanine (DLPA):**

- D,L- Phenylalanine is a natural amino acid, which is a powerful, non-addictive analgesic.
- DLPA works by intensifying and prolonging the body's natural painkilling response.
- DLPA inhibits several enzymes, which are responsible for the destruction of endorphins, the body's endogenously produced pain killing hormones. Therefore the pain relief triggered by the body as a natural reaction to injury, disease and inflammation is dramatically intensified and prolonged.
- It is non-addictive and non-toxic.
