

# Dry Contact I/O Card (AP9614)

Easily and securely connect and monitor your peripheral devices

The **Dry Contact I/O Card** connects peripheral devices like buttons, door sensors, alarm panels, or float switches to the UPS.

## Through the web user interface, you can:

- Monitor the status of the connected device
- Configure settings for the dry contact
- Monitor and configure connected Universal I/O sensors and contacts
- Set actions based on status changes or UPS events

## Introducing the Next-Generation Dry Contact I/O Card (AP9614)

The AP9614 replaces the AP9613, and provides improved benefits such as:

**User-friendly Web Interface:** Monitor your device from anywhere with our intuitive web user interface.

**Best-in-class Security:** Advanced technology and features keep sensitive data secure with the newest and best-in-class security compliance.

**Streamlined Firmware Updates:** Easily update your device's firmware through the new web interface, making maintenance simpler than ever.
